BYB1 Core Principles

Mark Scheme

2008 examination - June series

Mark schemes are prepared by the Principal Examiner and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation meeting attended by all examiners and is the scheme which was used by them in this examination. The standardisation meeting ensures that the mark scheme covers the candidates' responses to questions and that every examiner understands and applies it in the same correct way. As preparation for the standardisation meeting each examiner analyses a number of candidates' scripts: alternative answers not already covered by the mark scheme are discussed at the meeting and legislated for. If, after this meeting, examiners encounter unusual answers which have not been discussed at the meeting they are required to refer these to the Principal Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of candidates' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available to download from the AQA Website: www.aqa.org.uk

Question	Part	Sub Part	Marking Guidance	Mark	Comments
1	(a)	(i)	Box around OH and H of appropriate OH groups;	1	
1	(a)	(ii)	Condensation (reaction);	1	
1	(a)	(iii)	22;	1	
1	(b)		Heat with benedict's (solution); Red/orange/yellow/green colour (with maltose) / no change/remains blue (with sucrose);	1 1	If heated with acid withhold first marking point

Question	Part	Sub Part	Marking Guidance	Mark	Comments
2	(a)		A = capsule / slime/mucus (layer);	1	
			B = flagellum;	1	
2	(b)		Ribosome;	1	
2	(c)		(Electrons have) shorter wavelength;	1	Reference to magnification =
			Greater resolution / can distinguish between close objects;	1	neutral
2	(d)		Contains DNA;	1	2 max
			Ribosomes;	1	
			Folded (inner) membrane / cristae / double membrane;	1	
			Don't contain membrane-bound organelles/named example	1	

Question	Part	Sub Part	Marking Guidance	Mark	Comments																				
3	(a)		<table><thead><tr><th>Enzyme</th><th>Site of production</th><th>Substrate</th><th>Product</th></tr></thead><tbody><tr><td>Amylase</td><td>Salivary glands</td><td>Starch or Amylase</td><td>Maltose;</td></tr><tr><td>Endopeptidase</td><td>Stomach</td><td>Protein</td><td>Polypeptides or peptides;</td></tr><tr><td>Lipase</td><td>Pancreas</td><td>Lipid</td><td>Fatty acids and glycerol;</td></tr><tr><td>Maltase</td><td>Ileum</td><td>Maltose</td><td>Glucose;</td></tr></tbody></table>	Enzyme	Site of production	Substrate	Product	Amylase	Salivary glands	Starch or Amylase	Maltose;	Endopeptidase	Stomach	Protein	Polypeptides or peptides;	Lipase	Pancreas	Lipid	Fatty acids and glycerol;	Maltase	Ileum	Maltose	Glucose;	4	One mark for each correct row Allow polypeptide as substrate with smaller polypeptides/peptides as product Dipeptides = neutral Reject = amino acids
Enzyme	Site of production	Substrate	Product																						
Amylase	Salivary glands	Starch or Amylase	Maltose;																						
Endopeptidase	Stomach	Protein	Polypeptides or peptides;																						
Lipase	Pancreas	Lipid	Fatty acids and glycerol;																						
Maltase	Ileum	Maltose	Glucose;																						
3	(b)		Less fat in diet; Bile emulsifies lipids / produces small droplets; Increases surface area for (action of enzyme) <u>lipase</u> ;	1 1 1	Reject no fat in diet																				
3	(c)		Protease / lipase digests (pancreatic tissue);	1	Reject amylase																				

Question	Part	Sub Part	Marking Guidance	Mark	Comments
4	(a)		Transport/diffusion/absorption of named substance/group of substances / transport in specified 'fluid'/structure / reactions occur in solution;	1	
4	(b)	(i)	Insulation effect / provides a habitat;	1	
4	(b)	(ii)	Cooling effect / helps maintain (body) temperature / retention of water (in warm conditions);	1	
4	(b)	(iii)	Requires large amount of heat/energy to increase in temperature/ requires loss of a large amount of heat/energy to reduce in temperature / reduces fluctuations in temperature; Maintains (optimum) temperature for enzymes / cellular /chemical processes / reactions;	1	

Question	Part	Sub Part	Marking Guidance	Mark	Comments
5	(a)		0.26 (mg dm ⁻³ minute ⁻¹);	1	
5	(b)	(i)	Low <u>kinetic</u> energy; Fewer collisions/enzyme substrate complexes;	1 1	
5	(b)	(ii)	Denaturation / alteration in tertiary/3D structure; Breaking of specifically named bonds; (not peptide bonds) Change in <u>active site</u> , substrate cannot bind;	1 1 1	3 max Disulphide bonds = neutral
5	(c)		Similar in structure/shape / similar (chemical) group; Attach to active site; <u>Competitive</u> inhibition; OR Differ in structure/shape; Attach away from active site; <u>Non-Competitive</u> inhibition;	1 1 1 1 1 1	3 max Reject same shape for competitive inhibitor Competes for active site = 2 marks Allow description of competing for active site

Question	Part	Sub Part	Marking Guidance	Mark	Comments
6	(a)		Contraction of intercostal <u>muscles</u> pulls ribs up and out/raises ribcage;	1	Reject internal intercostal muscles contract
			Contraction of diaphragm <u>muscles</u> , flattens diaphragm;	1	
			Increase in volume, decrease in pressure (of thorax air drawn inwards);	1	
6	(b)	(i)	500;	1	
6	(b)	(ii)	(135000 – 7500) x 100 divided by 7500;	1	Correct answer = 2 marks
			1700;	1	
6	(c)		Due to increase in percentage of water vapour (in expired air);	1	Reference to carbon dioxide = neutral

Question	Part	Sub Part	Marking Guidance	Mark	Comments
7	(a)		Large surface area to volume ratio / thin in centre / concave;	1	
			Reference to diffusion;	1	
7	(b)	(i)	Same concentration / same water potential;	1	Allow answers based on no osmosis/diffusion
7	(b)	(ii)	Higher/less negative water potential of distilled water;	1	Reject turgid for third marking point
			Water moves into cells by diffusion / osmosis into cells;	1	
			Cells burst;	1	
7	(c)		Phospholipid <u>bilayer</u> ;	1	6 max Allow description of active transport which includes use of ATP/energy and movement against the concentration gradient
			Allows movement of lipid soluble / non-polar molecules / water / gases / e.g. O ₂ and CO ₂ OR prevents movement of water soluble / (named) polar molecules;	1	
			Carrier proteins;	1	
			Channel proteins;	1	
			Facilitated diffusion; (only awarded if linked to carrier/channel proteins)	1	
			Active transport; (only awarded if linked to carrier protein)	1	
			Reference to complementary/tertiary structure of protein;	1	
			Saturated fatty acids decrease permeability/fluidity / converse for unsaturated fatty acids;	1	
			Cholesterol decreases permeability/fluidity;	1	

				Receptor protein linked to control of entry of named substance e.g. insulin and glucose;	1		
7		(c)	QWC		1		To be awarded on 7(c) only
