CHEMISTRY **CHM3/W**
Unit 3(a) Introduction to Organic Chemistry

Wednesday 6 June 2007 9.00 am to 10.00 am

Instructions to Invigilators

Before the start of the examination please ask candidates to amend their question papers as follows. (Please read out this message twice to ensure understanding.)

Turn to page 6, question 3 (a)(i)

The word 'occurring' has been misspelt as 'occuring'.
Insert the letter 'r' after the first letter 'r' so
that the word reads 'occurring'.

ASSESSMENT and QUALIFICATIONS ALLIANCE

CHEMISTRY **CHM3/W**
Unit 3(a) Introduction to Organic Chemistry

Wednesday 6 June 2007 9.00 am to 10.00 am

For this paper you must have
- a calculator.

Time allowed: 1 hour

Instructions

- Use blue or black ink or ball-point pen.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- Answer the questions in **Section A** and **Section B** in the spaces provided.
- Your answers to the parts of **Section B** should be on the pages indicated.
- All working must be shown.
- Do all rough work in this book. Cross through any work you do not want to be marked.
- The Periodic Table/Data Sheet is provided as an insert.

Information

- The maximum mark for this paper is 60.
- The marks for questions are shown in brackets.
- You are expected to use a calculator where appropriate.
- Write your answer to the question in **Section B** in continuous prose, where appropriate. You will be assessed on your ability to use an appropriate form and style of writing, to organise relevant information clearly and coherently, and to use specialist vocabulary, where appropriate.

Advice

- You are advised to spend about 45 minutes on **Section A** and about 15 minutes on **Section B**.

LEAVE MARGIN BLANK

SECTION A

Answer **all** the questions in the spaces provided.

1 (a) Petroleum contains a mixture of hydrocarbons. The mixture can be separated into fractions by fractional distillation.

(i) State what is meant by the term *hydrocarbon*.

.....

.....

(ii) State the two physical changes which occur during fractional distillation.

Change 1 .....

Change 2 .....

(3 marks)

(b) The cracking of fractions obtained from petroleum can lead to high yields of ethene. Ethene can be polymerised to form poly(ethene). Ethene can also be oxidised to form the very reactive compound epoxyethane.

(i) Draw the structure of the repeating unit of poly(ethene).

(ii) State why epoxyethane is a very reactive compound.

.....

.....

(iii) Name the product formed when epoxyethane reacts with water.

.....

(3 marks)

6

www.theallpapers.com

LEAVE MARGIN BLANK

2 The cracking of alkanes gives useful products such as motor fuels and alkenes.

(a) (i) Name the type of reactive intermediate formed during the catalytic cracking of alkanes.

.....

(ii) Identify a catalyst used in catalytic cracking.

.....

(2 marks)

(b) (i) Name the type of reactive intermediate formed during the thermal cracking of alkanes.

.....

(ii) Write an equation for the thermal cracking of one molecule of the alkane $C_{10}H_{22}$ to produce a different alkane and propene only.

.....

(2 marks)

(c) Motor fuels contain cyclohexane, C_6H_{12}

(i) State which of the two types of cracking is more likely to produce cyclohexane as one of the products.

.....

(ii) State the conditions necessary for cyclohexane to undergo complete combustion.

.....

(iii) Draw the structure of cyclohexane.

(iv) Write an equation for the incomplete combustion of C_6H_{12} to form carbon and water only.

.....

(4 marks)

www.theallpapers.com

LEAVE MARGIN BLANK

(d) The burning of fuels in a petrol engine produces some carbon monoxide and some nitrogen monoxide.
These two gases are atmospheric pollutants which can be removed by the use of a catalytic converter.

(i) Write an equation for the reaction in which nitrogen monoxide is formed in a petrol engine. State **one** essential condition for this reaction to occur.

Equation .....

Condition .....

(ii) Identify **one** of the metals used as a catalyst in a catalytic converter.

.....

(iii) Write an equation to show how carbon monoxide and nitrogen monoxide react together in a catalytic converter.

.....

(4 marks)

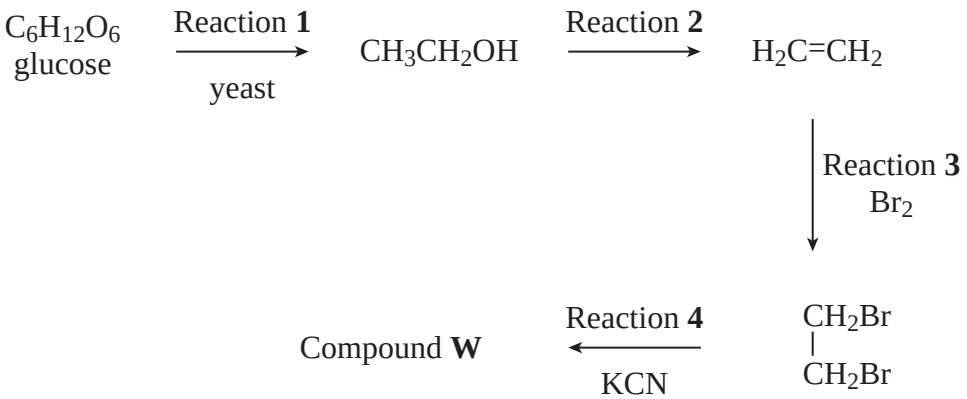
12

Turn over for the next question

www.theallpapers.com

LEAVE MARGIN BLANK

3 Consider the following sequence of reactions.



(a) (i) Name the process occuring in Reaction **1**.

.....

(ii) Write an equation for Reaction **1** and state a suitable temperature for this process to occur.

Equation

Suitable temperature .....

(3 marks)

(b) Name the type of mechanism in Reaction **2**.

.....

(1 mark)

(c) Outline a mechanism for Reaction **3**.

(4 marks)

www.theallpapers.com

LEAVE MARGIN BLANK

(d) Compound **W** is formed in Reaction **4**.

(i) Name the type of mechanism in Reaction **4**.

.....

(ii) Draw the structural formula of compound **W** (M_r = 80.0), showing all of the bonds in the molecule.

.....

(2 marks)

10

Turn over for the next question

www.theallpapers.com

LEAVE MARGIN BLANK

4 Isomers are compounds with the same molecular formula.

(a) Compound **X** is the alcohol $CH_3CH(OH)CH_3$

(i) Name compound **X**.

.....

(ii) Draw the structure of the position isomer of compound **X**.

(2 marks)

(b) Compound **Y** is the alkene $(CH_3)_2C{=}C(CH_3)_2$

(i) Name compound **Y**.

.....

(ii) Draw the structure of a straight-chain isomer of compound **Y**.

(2 marks)

(c) Compound **Z** is the ketone $CH_3CH_2COCH_2CH_3$

(i) Name compound **Z**.

.....

(ii) Draw the structure of a functional group isomer of compound **Z** which contains a C=O group.

(2 marks)

www.theallpapers.com

LEAVE MARGIN BLANK

(d) (i) Name the type of stereoisomerism shown by 1,2-dibromoethene.

.....

(ii) Draw and name the two stereoisomers of 1,2-dibromoethene.

*Stereoisomer **1***

*Stereoisomer **2***

Name ..... *Name* .....

(3 marks)

(e) What feature of the double bond in 1,2-dibromoethene prevents Stereoisomer **1** from changing into Stereoisomer **2**?

.....

(1 mark)

10

Turn over for the next question

LEAVE MARGIN BLANK

5 The following table shows some carboxylic acids which occur in nature.

Name	Structure
Stearic acid	$CH_3(CH_2)_{16}COOH$
Linoleic acid	$CH_3(CH_2)_4CH{=}CHCH_2CH{=}CH(CH_2)_7COOH$
Ricinoleic acid	$CH_3(CH_2)_4CH_2CH(OH)CH_2CH{=}CH(CH_2)_7COOH$

(a) Give the molecular formula of stearic acid.

.....

(1 mark)

(b) (i) Give the empirical formula of linoleic acid.

.....

(ii) Identify the reagent and catalyst needed to convert linoleic acid into stearic acid.

Reagent .....

Catalyst .....

(3 marks)

(c) Linoleic acid can be converted into ricinoleic acid.

(i) Name the type of reaction involved.

.....

(ii) Suggest why this reaction leads to the formation of more than one organic product.

.....

.....

(2 marks)

(d) Ricinoleic acid has an alcohol functional group. Identify the class of alcohols to which ricinoleic acid belongs.

.....

(1 mark)

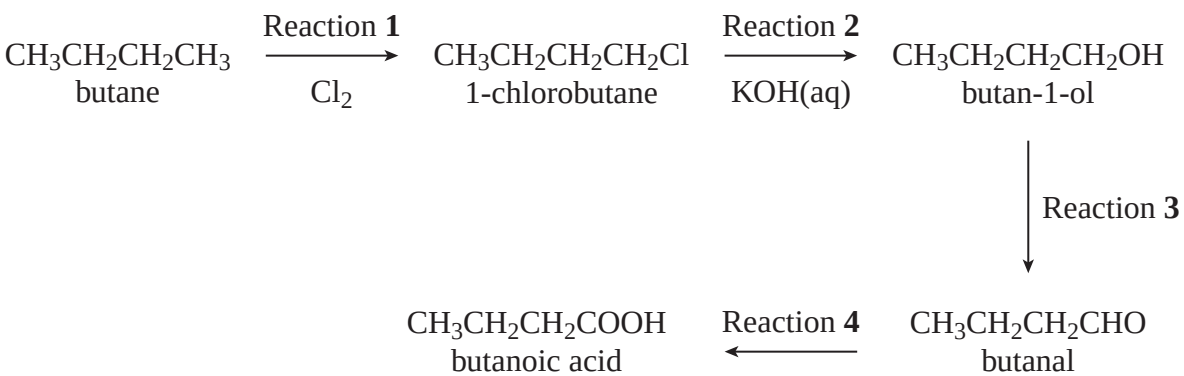
www.theallpapers.com

LEAVE MARGIN BLANK

SECTION B

Answer the question below in the space provided on pages 12 to 14 of this booklet.
You should answer part (a) on page 12, part (b) on page 13 and part (c) on page 14.

6 Consider the following sequence of reactions.



(a) The type of mechanism for Reaction **1** is the same as that for the chlorination of methane. Identify the type of reactive intermediate and state the conditions for this reaction.
Give the name of each step in this type of mechanism.
Write an overall equation for the reaction that occurs when C_4H_{10} reacts with a large excess of chlorine to form C_4Cl_{10}

(6 marks)

(b) In Reaction **2**, a nucleophile reacts with 1-chlorobutane to form butan-1-ol as the main organic product. State what is meant by the term *nucleophile*.
Identify the nucleophile in Reaction **2** and the feature of the 1-chlorobutane molecule which makes it susceptible to nucleophilic attack.
Give **one** change to the reaction conditions for Reaction **2** so that the main organic product is but-1-ene rather than butan-1-ol.

(4 marks)

(c) Reactions **3** and **4** are of the same type. For these two reactions, state the type of reaction involved, identify a suitable reagent or combination of reagents and state how a high yield of butanoic acid can be obtained.
Outline a simple chemical test to detect the presence of any unreacted butanal in the final reaction mixture.

(5 marks)
