Advanced Subsidiary Examination

**MATHEMATICS AND STATISTICS
(SPECIFICATION B)
Unit Pure 2**

MBP2

Tuesday 2 November 2004 Morning Session

In addition to this paper you will require:

- an 8-page answer book;
- the AQA booklet of formulae and statistical tables.

You may use a standard scientific calculator **only**.

Time allowed: 1 hour 15 minutes

Instructions

- Use blue or black ink or ball-point pen. Pencil should only be used for drawing.
- Write the information required on the front of your answer book. The *Examining Body* for this paper is AQA. The *Paper Reference* is MBP2.
- Answer **all** questions.
- All necessary working should be shown; otherwise marks for method may be lost.
- The **final** answer to questions requiring the use of tables or calculators should normally be given to three significant figures.

Information

- The maximum mark for this paper is 60.
- Mark allocations are shown in brackets.

Advice

- Unless stated otherwise, formulae may be quoted, without proof, from the booklet.

Answer **all** questions.

- 1 The diagram shows a sector of a circle, centre O and radius 10 cm. The angle of the sector is θ radians and the arc length is 4 cm.

- (a) Find the value of θ . (2 marks)
- (b) Find the area of the sector. (2 marks)

- 2 A geometric series begins

$$720 - 576 + 460.8 - \dots$$

- (a) (i) Show that the common ratio of the series is -0.8 . (1 mark)
- (ii) Give a reason why the series is convergent. (1 mark)
- (b) Find the n th term of the series. (2 marks)
- (c) Show that the sum of the first 15 terms of the series is approximately 414. (2 marks)
- (d) Find the sum to infinity of the series. (2 marks)

- 3 A polynomial is given by $p(x) = x^3 - 2x^2 - 11x + 12$.

- (a) Use the factor theorem to show that $(x - 4)$ is a factor of $p(x)$. (2 marks)
- (b) Express $p(x)$ as a product of three linear factors. (4 marks)
- (c) Hence find all the real solutions of

$$y^6 - 2y^4 - 11y^2 + 12 = 0 \quad (3 \text{ marks})$$

- 4 Find, in radians, the values of x in the interval $0 \leq x \leq 2\pi$ for which

$$\sin\left(x + \frac{\pi}{3}\right) = -0.3$$

Give your answers to 3 significant figures.

(6 marks)

- 5 (a) Sketch the graph of $y = |8x|$. (2 marks)
- (b) Sketch the graph of $y = \frac{1}{x^2}$, $x \neq 0$. (2 marks)
- (c) (i) Verify that $x = \frac{1}{2}$ is a solution of the equation $\frac{1}{x^2} - |8x| = 0$. (1 mark)
- (ii) The graphs of $y = \frac{1}{x^2}$ and $y = |8x|$ intersect at two points A and B . Find the coordinates of A and B . (2 marks)

- 6 The function f is defined for $x > 0$ by

$$f(x) = e^{4x} - \frac{1}{x}$$

- (a) (i) Differentiate $f(x)$ with respect to x to find $f'(x)$. (3 marks)
- (ii) Hence prove that f is an increasing function. (2 marks)
- (b) Show that the area of the region bounded by the curve $y = e^{4x} - \frac{1}{x}$, the x -axis, and the lines $x = 1$ and $x = 2$ is

$$\frac{e^4(e^4 - 1)}{4} - \ln 2$$

(You may assume that this region lies entirely above the x -axis.)

(4 marks)

- (c) The curve $y = e^{4x} - \frac{1}{x}$ and the curve $y = 7 - \frac{1}{x}$ intersect at the point A . Find the x -coordinate of A , giving your answer in the form $a \ln b$, where a and b are constants to be found. (3 marks)

7 A curve C is defined for $x > 0$ by the equation

$$y = 2 \ln x - 4x$$

The curve has a stationary point P .

- (a) (i) Find $\frac{dy}{dx}$. *(2 marks)*
- (ii) Find the gradient of the curve at the point where $x = 2$. *(1 mark)*
- (b) Show that the x -coordinate of the stationary point P is $\frac{1}{2}$. *(2 marks)*
- (c) (i) Find $\frac{d^2y}{dx^2}$. *(1 mark)*
- (ii) Hence determine whether P is a maximum or a minimum point. *(2 marks)*
- (d) The gradient at the point Q on the curve C is 4.
- (i) Show that the x -coordinate of Q is $\frac{1}{4}$. *(2 marks)*
- (ii) Find the gradient of the line PQ , giving your answer in the form $a \ln 2 + b$, where a and b are integers to be found. *(4 marks)*

END OF QUESTIONS
