GCE 2004 June Series

Mark Scheme

Mathematics and Statistics B *MBP5*

Mark schemes are prepared by the Principal Examiner and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation meeting attended by all examiners and is the scheme which was used by them in this examination. The standardisation meeting ensures that the mark scheme covers the candidates' responses to questions and that every examiner understands and applies it in the same correct way. As preparation for the standardisation meeting each examiner analyses a number of candidates' scripts: alternative answers not already covered by the mark scheme are discussed at the meeting and legislated for. If, after this meeting, examiners encounter unusual answers which have not been discussed at the meeting they are required to refer these to the Principal Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of candidates' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available from:

Key to Mark Scheme

3.4	1 ' C	.1 1
M	mark is for	method
m	mark is dependent on one or more M marks and is for	method
A	mark is dependent on M or m marks and is for	accuracy
В	mark is independent of M or m marks and is for	accuracy
E	mark is for	explanation
or ft or F		follow through from previous
		incorrect result
cao		correct answer only
cso		correct solution only
awfw		anything which falls within
awrt		anything which rounds to
acf		any correct form
ag		answer given
sc		special case
oe		or equivalent
sf		significant figure(s)
dp		decimal place(s)
A2,1		2 or 1 (or 0) accuracy marks
–x ee		deduct x marks for each error
pi		possibly implied
sca		substantially correct approach

Abbreviations used in Marking

MC-x	deducted x marks for mis-copy
MR - x	deducted x marks for mis-read
isw	ignored subsequent working
bod	given benefit of doubt
wr	work replaced by candidate
fb	formulae book

Application of Mark Scheme

No	met	hod	sh	own:
----	-----	-----	----	------

Correct answer without working	mark as in scheme
Incorrect answer without working	zero marks unless specified otherwise
More than one method / choice of solution:	
2 or more complete attempts, neither/none crossed out	mark both/all fully and award the mean mark rounded down
1 complete and 1 partial attempt, neither crossed out	award credit for the complete solution only
Crossed out work	do not mark unless it has not been replaced
Alternative solution using a correct or partially correct method	award method and accuracy marks as appropriate

Question Number	Solution	Marks	Total	Comments
and Part	/ \1			
1(a)(i)	$(1+x)^{-1}\approx 1-x$	B1		
	$+x^2-x^3$	B1	2	
(ii)	$(1+4x)^{\frac{1}{2}} = 1 + /-kx \dots$ $\left(\frac{1}{2}(4x) + \frac{\left(\frac{1}{2}\right)\left(-\frac{1}{2}\right)}{2!}(4x)^{2} + \frac{1}{2!}(4x)^{2} $	M1		Valid start to binomial expn.
	$ \left(\frac{\frac{1}{2}(4x) + \frac{(2)(-2)}{2!}(4x)^{2} + \frac{(\frac{1}{2})(-\frac{1}{2})(-\frac{3}{2})}{3!}(4x)^{3} + \dots\right) $	A1		Unsimplified form condone 1 error
	$= 1 + 2x - 2x^2 + 4x^3 \dots$	A2,1	4	(A1 if 3 simplified terms correct)
(b)	= $2(1+4x)^{\frac{1}{2}} + 4(1+x)^{-1} =$	M1		Clear correct use of both expansions
	$= 6 + 4x^3$	A1	2	cso Must be convinced
	Total	711	8	eso must be convinced
2	Mid-ordinates are 1.25, and 1.75	B1	-	oe
	$\int \approx 0.5[f(1.25) + f(1.75)]$	M1		
	$\approx 0.5\{0.17885098+0.0622753\}$ $\approx 0.1205 = 0.121 \text{ (to 3 dp)}$	A1	3	must be 0.121
	Total		3	
3(a)	$R\cos\alpha = 6 \text{ or } R\sin\alpha = 8 \text{ or } \tan\alpha = \frac{8}{6}$	M1		Accept seen; condone negative signs
	$R^2 = 6^2 + 8^2$	M1		Alternatively use 2 results in line1.
	$\Rightarrow 10\cos(x+53.1^{\circ})$	A1	3	For α accept awrt 53.1° but R must be 10.
(b)	$\cos(x + \alpha) = 3/R$	M1		Possibly implied
	$x + \alpha = 360n \pm \dots$	m1		Accept degrees, rads., mix
	$x + \alpha = 360n \pm 72.5(4)$	A1		oe but right hand side must be in degrees
	$x = 360n \pm 72.5(4) - 53.1(3)$ [$x = 360n + \{19.3 \text{ to } 19.5 \text{ inclusive}\}$ $x = 360n - \{125 \text{ to } 126 \text{ inclusive}\}$]	A1	4	Any equivalent forms in degrees sc if m0 then award B1 for either one general solution or 2 particular solutions. covering both branches
	Total		7

Number and Part				
4(a)(i)	$\frac{\mathrm{d}y}{\mathrm{d}x} = \frac{1}{6}$			
		B1	1	
(ii)		M1		ft on (i); used $m \times m' = -1$
	Eqn of normal $y-1 = -6(x-1)$	m1	_	
(1.)	$y - 1 = -6x + 6 \Rightarrow y + 6x = 7$	A1	3	ag
	$2y \mathrm{d}y = \frac{1}{x+2} \mathrm{d}x$	M1		Clear attempt to separate variables appropriately
	$y^2 = \int \frac{1}{x+2} \mathrm{d}x$	A1		
	$y^2 = \ln x+2 + c$	A1		Condone absence of mod signs and '+c'
	When $x = 1$, $y = 1 \Rightarrow 1 = \ln 3 + c$	m1		Valid method for c
	$y^2 = \ln(x+2) + 1 - \ln 3$	A1	5	oe
5(a)	Asymptote $x = -1$	B1	9	
3(a)		Di		
	$y = x - 1 + \frac{1}{x + 1}$	M1		Full attempt to divide out
	Asymptote $y = x - 1$	A1	3	
(b)	Turning point (0,0)	B1		Alternative Valid method to find $y'(x)$
	When $y = -4$, $x^2 + 4x + 4 = 0$	M1		and then puts $y'(x) = 0$ [M1]
	Turning point $(-2, -4)$	A1	3	$x^{2} + 2x = 0 \Rightarrow \text{TPs } (0,0)$ [A1] and (-2, -4) [A1]
(c)	V	D1		
	-1 O x	B1		Single upper branch; shape and y not < 0
		B1		Single lower branch; shape and y not > -4
	4	B1	3	Dependent on previous two Bs. Asymptotic behaviour on both branches; through the origin
	T-4-1		Λ
