PHYSICS (SPECIFICATION A) PHA3/W
Unit 3 Current Electricity and Elastic Properties of Solids

Monday 14 June 2004 Afternoon Session

In addition to this paper you will require:

- a calculator;
- a pencil and a ruler.

Time allowed: 1 hour

Instructions

- Use blue or black ink or ball-point pen.
- Fill in the boxes at the top of this page.
- Answer **all** questions in the spaces provided. All working must be shown.
- Do all rough work in this book. Cross through any work you do not want marked.

Information

- The maximum mark for this paper is 50.
- Mark allocations are shown in brackets.
- The paper carries 25% of the total marks for Physics Advanced Subsidiary and carries 12 ½% of the total marks for Physics Advanced.
- A *Data Sheet* is provided on pages 3 and 4. You may wish to detach this perforated sheet at the start of the examination.
- You are expected to use a calculator where appropriate.
- In questions requiring description and explanation you will be assessed on your ability to use an appropriate form and style of writing, to organise relevant information clearly and coherently, and to use specialist vocabulary where appropriate. The degree of legibility of your handwriting and the level of accuracy of your spelling, punctuation and grammar will also be taken into account.

Data Sheet

- A perforated Data Sheet is provided as pages 3 and 4 of this question paper.
- This sheet may be useful for answering some of the questions in the examination.
- You may wish to detach this sheet before you begin work.

Answer **all** questions in the spaces provided.

1 A battery is connected across a uniform conductor. The current in the conductor is 40 mA.

(i) Calculate the total charge that flows past a point in the conductor in 3 minutes.

.....
.....
.....

(ii) Using data from the Data Sheet calculate the number of electron charge carriers passing the same point in the conductor in this time.

.....
.....

(iii) If 8.6 J of energy are transferred to the conductor in this time, calculate the potential difference across the conductor.

.....
.....
.....

(iv) Calculate the resistance of the conductor.

TURN OVER FOR THE NEXT QUESTION

- 3 In the circuit shown, a battery of emf ϵ and internal resistance r is connected to a variable resistor R . The current I and the voltage V are read by the ammeter and voltmeter respectively.

- (a) The emf is related to V , I and r by the equation

$$\epsilon = V + Ir.$$

Rearrange the equation to give V in terms of ϵ , I and r .

.....
(1 mark)

- (b) In an experiment, the value of R is altered so that a series of values of V and the corresponding values of I are obtained. Using the axes, sketch the graph you would expect to obtain as R is changed.

- (b) A thin film of carbon may be used in some electronic systems. Typical dimensions of such a film are shown in **Figure 3**.

Figure 3

- (i) Calculate the resistance of the carbon film to a current I passing through it as shown in **Figure 3**.

resistivity of carbon = $4.0 \times 10^{-5} \Omega \text{ m}$

.....

.....

- (ii) Without recalculating the resistance of the carbon film, explain how you would expect the resistance to change if the current flowed as in **Figure 4**. You should consider the numerical ratio or factor by which each dimension affecting the resistance has changed.

- (b) A rigid bar AB of negligible mass, is suspended horizontally from two long, vertical wires as shown in the diagram. One wire is made of steel and the other of brass. The wires are fixed at their upper end to a rigid horizontal surface. Each wire is 2.5 m long but they have different cross-sectional areas.

When a mass of 16 kg is suspended from the centre of AB, the bar remains horizontal.

the Young modulus for steel = 2.0×10^{11} Pa

the Young modulus for brass = 1.0×10^{11} Pa

- (i) What is the tension in each wire?

.....

- (ii) If the cross-sectional area of the steel wire is $2.8 \times 10^{-7} \text{ m}^2$, calculate the extension of the steel wire.

.....

- (iii) Calculate the cross-sectional area of the brass wire.

.....

- (iv) Calculate the energy stored in the steel wire.

.....

(c) The brass wire is replaced by a steel wire of the same dimensions as the brass wire. The same mass is suspended from the midpoint of AB.
