 Advanced Level Examination

**PHYSICS (SPECIFICATION A)**  
**Unit 5 Nuclear Instability: Astrophysics Option**

**PHA5/W**

Thursday 17 June 2004 Morning Session

**In addition to this paper you will require:**

- a calculator;
- a pencil and a ruler.

**Instructions**

- Use blue or black ink or ball-point pen.
- Fill in the boxes at the top of this page.
- Answer **all** questions in the spaces provided. All working must be shown.
- Do all rough work in this book. Cross through any work you do not want marked.

**Information**

- The maximum mark for this paper is 40.
- Mark allocations are shown in brackets.
- The paper carries 10% of the total marks for Physics Advanced.
- A *Data Sheet* is provided on pages 3 and 4. You may wish to detach this perforated sheet at the start of the examination.
- You are expected to use a calculator where appropriate.
- In questions requiring description and explanation you will be assessed on your ability to use an appropriate form and style of writing, to organise relevant information clearly and coherently, and to use specialist vocabulary where appropriate. The degree of legibility of your handwriting and the level of accuracy of your spelling, punctuation and grammar will also be taken into account.

**Data Sheet**

- A perforated *Data Sheet* is provided as pages 3 and 4 of this question paper.
- This sheet may be useful for answering some of the questions in the examination.
- You may wish to detach this sheet before you begin work.

**Fundamental constants and values**

**TURN OVER FOR THE FIRST QUESTION**

**SECTION A: NUCLEAR INSTABILITY**

Answer **all** parts of the question.

- 1 (a) A radioactive source gives an initial count rate of 110 counts per second. After 10 minutes the count rate is 84 counts per second.

background radiation = 3 counts per second

- (i) Give **three** origins of the radiation that contributes to this background radiation.

1 .....

2 .....

3 .....

- (ii) Calculate the decay constant of the radioactive source in  $s^{-1}$ .

.....  
.....  
.....  
.....  
.....  
.....  
.....

- (iii) Calculate the number of radioactive nuclei in the initial sample assuming that the detector counts all the radiation emitted from the source.

.....  
.....  
.....  
.....

(7 marks)

- (b) Discuss the dangers of exposing the human body to a source of  $\alpha$  radiation. In particular compare the dangers when the  $\alpha$  source is held outside, but in contact with the body, with those when the source is placed inside the body.

You may be awarded marks for the quality of written communication in your answer.

**SECTION B: ASTROPHYSICS**Answer **all** questions.

2 In an experiment to find the focal length of a convex lens, light from a distant, bright, white light source is focused onto a screen.

- (i) A focused image is formed on the screen when the distance between the lens and screen is 0.10 m. Calculate the power of the lens.

.....  
 .....

- (ii) This image has a purple edge. What is the name of the effect producing this?

.....

- (iii) Complete **Figure 1** to draw a labelled ray diagram to show how this effect occurs.

**Figure 1***(4 marks)*

—

- 3 (a) Draw a ray diagram to show the path of two rays, parallel to the axis, through a Cassegrain telescope, as far as the eyepiece.

(2 marks)

- (b) The UKIRT is a Cassegrain telescope capable of detecting both infrared and visible radiation. It has an objective diameter of 3.8 m.

- (i) Calculate the resolving power of this telescope for infrared light of wavelength  $2.0\ \mu\text{m}$ .

.....  
 .....  
 .....

- (ii) Explain why the resolving power of this telescope is better in the visible region than in the infrared region.

.....  
 .....  
 .....  
 .....

(4 marks)

- (c) To reduce atmospheric absorption problems, the telescope was built at the top of Mount Mauna Kea in Hawaii.

- (i) What, in the atmosphere, is responsible for absorbing infrared radiation?

.....

- (ii) The spectrum of light from a star can be used to determine its temperature. Explain why this absorption can lead to errors in the value.

.....  
 .....  
 .....

- 4 (a) (i) On the axes below draw the Hertzsprung-Russell (H-R) diagram labelling the main sequence stars, dwarf stars and giant stars. Complete the horizontal axis by labelling the spectral classes.

- (ii) On the H-R diagram, mark with an **X** the current position of the Sun and draw a line to represent the evolution of the Sun, from its formation to its eventual state as a white dwarf. (4 marks)

(b) Matar is a star in the same spectral class as the Sun.

(i) State **two** properties common to Matar and the Sun.

.....  
.....

(ii) The distance to Matar is 330 light years. What is this distance in parsec?

.....

(iii) The apparent magnitude of Matar is 2.9. Calculate its absolute magnitude.

.....  
.....  
.....  
.....

(iv) Which is the larger star, Matar or the Sun? Explain your answer.
