ASSESSMENT and
QUALIFICATIONS
ALLIANCE

PHA5/W

Wednesday 11 June 2008 9.00 am to 10.15 am

### For this paper you must have:

- a pencil and a ruler
- a calculator
- a data sheet loose insert.

Time allowed: 1 hour 15 minutes

### **Instructions**

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- Answer the questions in the spaces provided. Answers written in margins or on blank pages will not be marked.
- Show all your working.
- Do all rough work in this book. Cross through any work you do not want to be marked.

### **Information**

- The maximum mark for this paper is 40. This includes up to 2 marks for the Quality of Written Communication.
- The marks for questions are shown in brackets.
- A Data Sheet is provided as a loose insert to this question paper.
- You are expected to use a calculator where appropriate.
- Questions 1(c) and 3(a) should be answered in continuous prose. In these questions you will be marked on your ability to use good English, to organise information clearly and to use specialist vocabulary where appropriate.

### SECTION A: NUCLEAR INSTABILITY

Answer all of this question.

1	(a)	An isotope of technetium $^{99}_{43}\text{Tc}^{\text{m}}$ , which is in a metastable state, decays emitting only $\gamma$ rays. When the isotope is placed 20 cm from a $\gamma$ ray detector the count rate is 25 counts per second. The background count rate is 120 counts per minute. Calculate the count rate, in counts per second, when the detector is placed 30 cm from the isotope.								
1	(b)	(i)	Calculate the approximate radius of a nucleus of $^{99}_{43}\text{Tc}^{\text{m}}$ , given that the nuclear radius of $^{28}_{14}\text{Si}$ is $3.7 \times 10^{-15}\text{m}$ .							
1	(b)	(ii)	State <b>one</b> method by which the nuclear radius of <sup>28</sup> <sub>14</sub> Si could be determined experimentally.							
			(4 marks)							

10

1	(c)	Explain why sources of $\beta$ radiation often also produce $\gamma$ rays of discrete frequencies.					
		You may be awarded additional marks to those shown in brackets for the quality of written communication in your answer to part (c).					
		(3 marks)

### **SECTION B: ASTROPHYSICS**

4

	Answer all questions.					
2	(a)		v a ray diagram to show how a converging lens forms a diminished image of a real et. Label the principal foci, the object and the image on your diagram.			
			(2 marks)			
2	(b)		nverging lens of power 12.5 D is used to produce an image of a real object placed m from the lens.			
2	(b)	(i)	Calculate the image distance.			
2	(b)	(ii)	State <b>three</b> properties of the image.			
			(4 marks)			

6

3	(a)	Expl	ain what is meant by the terms Rayleigh criterion and Airy disc.
			may be awarded additional marks to those shown in brackets for the quality of en communication in your answer.
			(3 marks)
3	(b)	four	Very Large Telescope (VLT) in the Atacama Desert in Chile is a combination of Cassegrain telescopes each of diameter 8.2 m. It is used to detect electromagnetic ation of wavelengths in the range 200 nm to 20 μm.
3	(b)	(i)	Show that the combination has a similar light-collecting power to that of a single 16 m diameter telescope.
3	(b)	(ii)	The VLT is capable of an angular resolution similar to that of a 100 m diameter telescope. Calculate the maximum angular resolution of the VLT.
3	(b)	(iii)	The Atacama Desert is possibly the driest place on Earth. What part of the electromagnetic spectrum is significantly absorbed by water vapour?
			(4 marks)

**4** (a) Sketch a Hertzsprung–Russell (H–R) diagram on the axes below. Label the position of the main sequence, dwarf and giant stars. Complete the spectral class axis by labelling the spectral classes.

(3 marks)

**4** (b) Beta Hydri is a star with the same black body temperature as the Sun, but is approximately 3.5 times brighter.

**4** (b) (i) Label with the letter X the position of Beta Hydri on the H–R diagram.

4 (b) (ii) State and explain which star is larger, the Sun or Beta Hydri.

(3 marks)

5		ZW 1 is an active galaxy, which means it contains a supermassive <i>black hole</i> which roduces a <i>quasar</i> as it consumes its host galaxy.								
5	(a)	Expl	ain what is meant by							
5	(a)	(i)	a quasar,							
5	(a)	(ii)	a black hole.							
5	(b)	Anal	(3 marks) lysis of radio waves from the galaxy IZW 1, suggest it is 800 million light years							
		from	Earth.							
5	(b)	(i)	Calculate the recessional speed of the galaxy.							
5	(b)	(ii)	The source of the radio waves is carbon monoxide molecules in the gas clouds of the galaxy. When measured from a lab-based source these waves have a frequency of 108 GHz. What is the frequency of the waves detected from the galaxy?							
			(4 marks)  Question 5 continues on the next page							

5	(c)	The black hole at the centre of IZW 1 could have a mass 100 million times greater than the Sun. Calculate the radius of the event horizon of a black hole of this mass.
