Question 3 is on the next page.

3 Garth Vader is a wholesaler who sells specialist cabinets. His fixed costs are \$8 million.

He buys in cabinet 1 for \$400 and sells it for \$500.

As an alternative he is considering manufacturing the cabinets and has studied two methods of production.

The manufacture of cabinet 2 relies more on labour whilst cabinet 3 relies more on machinery. The costs would be as follows:

	Cabinet 2	Cabinet 3
Variable costs per cabinet	\$240	\$220
Additional fixed costs per production line	\$36 million	\$79.2 million
Proposed selling price per cabinet	\$480	\$520

The additional fixed costs for cabinet 3 are higher as more expensive machinery has to be leased and additional factory rent will be paid.

It is assumed, whichever option is chosen, that all production will be sold.

Only **one** type of cabinet will be sold.

REQUIRED

(a) (i) Calculate for cabinet 2 the number to be sold so that the total annual costs equal the total purchase costs for cabinet 1.
