BIOLOGY 9700/31

Advanced Practical Skills 1

October/November 2012

2 hours

Candidates answer on the Question Paper.

Additional Materials: As listed in the Confidential Instructions.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black ink.

You may use a pencil for any diagrams, graphs or rough working.

Do **not** use red ink, staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

| For Examiner's Use | | | | | | | | | |

| Total | | | | | | | | | |

This document consists of 12 printed pages.

You are reminded that you have **only one hour** for each question in the practical examination.

For Examiner's Use

You should:

- read carefully through the whole of Question 1 and Question 2
- then plan your use of **the time** to make sure that you finish all the work that you would like to do.

You will gain marks for recording your results according to the instructions.

You are required to investigate how much glucose diffuses from a plant tissue extract through a partially permeable wall of Visking (dialysis) tubing.

Fig. 1.1 shows the apparatus you will set up for this investigation.

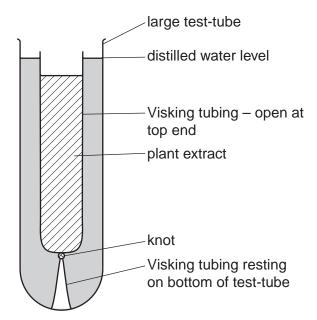

Fig. 1.1

You are provided with:

| labelled | contents | hazard | volume /cm³ |
|---------------------|----------------------|---------------------|----------------|
| Р | plant tissue extract | none | 20 |
| W | distilled water | none | 100 |
| G | 1% glucose solution | none | 25 |
| Benedict's solution | Benedict's solution | harmful irritant | 30 |

| labelled | contents | hazard | details | quantity |
|----------|-----------------------------------|--------|---------------------------------|----------|
| V | Visking tubing in distilled water | none | 15 cm length in distilled water | 1 |

Proceed as follows:

For Examiner's Use

- 1. Tie a knot in the Visking tubing as close as possible to one end so that it seals the end.
- 2. To open the other end, wet the Visking tubing and rub the tubing gently between your fingers.
- 3. Without mixing **P**, put some of **P** into the Visking tubing to the level shown in Fig.1.1.
- 4. Rinse the outside of the Visking tubing by dipping it into the water in the container labelled **V**.
- 5. Put the Visking tubing into the large test-tube.
- (a) (i) State the volume of W needed to reach the water level as shown in Fig.1.1.

volume of **W** cm³ [1]

- 6. Put the volume of **W**, as decided in (a)(i), into the large test-tube.
- 7. Put the large test-tube with the Visking tubing into a test-tube rack and leave for 20 minutes.

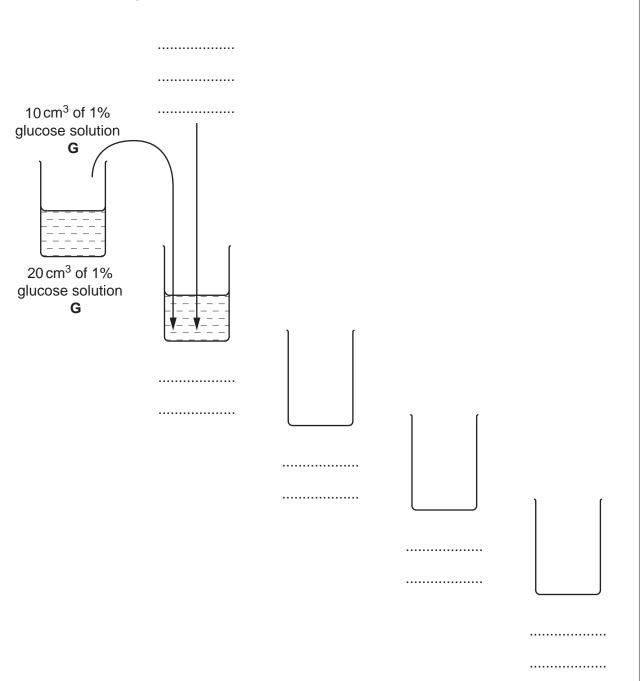

During the 20 minutes:

- set up a boiling water-bath ready for step 11
- make a serial dilution of 1% solution G which reduces the concentration of G by half between each successive dilution.

You will need to make up 20 cm³ of each concentration of solution **G**.

(ii) Complete Fig.1.2 to show how you will make **four** further concentrations of **G**, starting with the 1% solution, **G**.

For Examiner's Use

8. Prepare the concentrations of G as decided in (a)(ii) in the containers provided.

Fig. 1.2

- 9. After 20 minutes, which started at step 7, remove the Visking tubing and put it into the container labelled 'for waste'.
- 10. Pour the water from the large test-tube into a container and label it **S**.
- 11. Carry out the Benedict's test on all 6 solutions (five of G and one of S).

You will need to use $2\,\text{cm}^3$ of each of the solutions of **G** and **S** with $2\,\text{cm}^3$ of Benedict's solution.

[3]

12. Test each solution separately and record the time taken for the first appearance of any colour change. If there is no colour change after 120 seconds record 'more than 120'.

For Examiner's Use

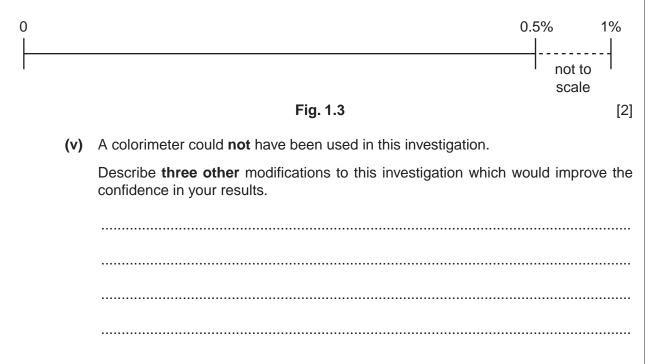

(iii) Prepare the space below and record your results.

[4]

- (iv) Complete Fig. 1.3 below to show
 - the positions of each of the percentage concentrations of solution G
- Examiner's Use

For

the letter S to show where the sample fits in the series of concentrations.

In a similar investigation, a student investigated how changing the concentration of glucose solution (independent variable) in the Visking tubing affected the quantity of glucose diffusing through the wall into the surrounding solution.

After 20 minutes a dye was added to the surrounding solution. This produced different intensities of colour depending on the glucose concentration in the surrounding solution.

A colorimeter was used to measure the absorbance of light by the coloured solution.

Other variables were considered and kept to a standard.

The student's results are shown in Table 1.1.

Table 1.1

| concentration of glucose solution inside the Visking tubing / arbitrary units | absorbance of light by the coloured solution /arbitrary units |
|---|---|
| 10 | 0.750 |
| 15 | 1.100 |
| 20 | 1.475 |
| 25 | 1.850 |
| 30 | 1.900 |

© UCLES 2012 9700/31/O/N/12

(b) (i) Plot a graph of the data shown in Table 1.1.

For Examiner's Use

(iii) Make a large drawing of one group of four complete touching xylem vessels as observed on the specimen on **J1**.

For Examiner's Use

On your drawing, use a label line and label to show one lumen.

Annotate your drawing with one observable feature.

[5]

Fig. 2.1 shows a diagram of a stage micrometer scale that is being used to calibrate an eyepiece graticule.

For Examiner's Use

One division, on either the stage micrometer scale or the eyepiece graticule, is the distance between two adjacent lines.

The length of one division on this stage micrometer is **0.1 mm**.

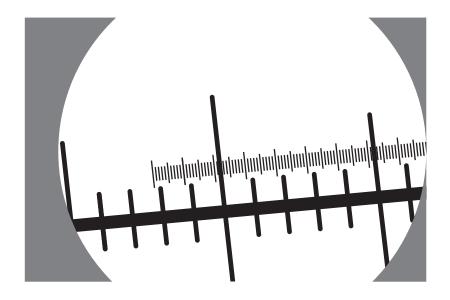

Fig. 2.1

(b) (i) Using this stage micrometer, where one division is **0.1 mm**, calculate the actual length of one eyepiece graticule unit using Fig. 2.1 by completing Fig. 2.2.

| Fi | g. 2.2 | | [3] |
|---|-----------------|------------------|----------------------|
| | multiplied by | | = |
| Convert the answer to a measurement wit | h the unit most | suitable for use | in light microscopy. |
| Step 2 | | | |
| 1 eyepiece graticule unit = | divided by | | = mm |
| Step 1 | ٦ | | ı |

Fig. 2.3 is a photomicrograph showing part of an organ from a plant of a different species.

For Examiner's Use

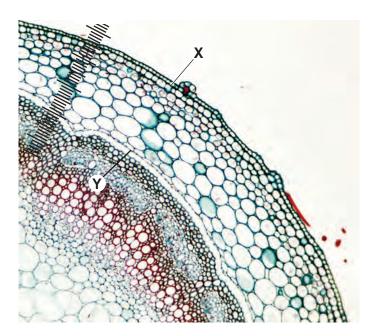

Fig. 2.3

(ii) Fig. 2.3 shows a photomicrograph taken using the same microscope with the same lenses as Fig. 2.1.

Use the calibration of the eyepiece graticule unit from **(b)(i)** and Fig. 2.3 to calculate the actual length of the plant tissue from $\bf X$ to $\bf Y$.

You will lose marks if you do not show all the steps in your calculation and do not use the appropriate units.

[2]

Fig 2.3 is shown again here to help you answer (c).

For Examiner's Use

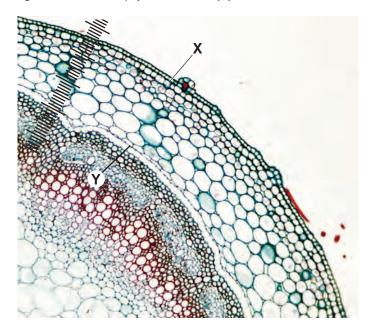

Fig. 2.3

- **(c)** Prepare the space below so that it is suitable for you to record observable differences between the specimen on slide **J1** and in Fig. 2.3, to include:
 - the vascular tissue
 - at least two other tissues.
