# MARK SCHEME for the May/June 2009 question paper

## for the guidance of teachers

# 9701 CHEMISTRY

9701/32 Paper 32 (Advanced Practical Skills 2), maximum raw mark 40

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2009 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

#### **Question 1**

#### Supervisor's Report

Calculate, correct to 2 d.p., the titre if the Supervisor had diluted  $42.75 \text{ cm}^3$  of **FB 2**.

This is given by the expression

 $\frac{42.75}{\text{volume diluted}} \times \text{titre}$ 

## **Candidate scripts**

Calculate the scaled titre for  $42.75 \text{ cm}^3$  of **FB 2**. Record the scaled value against the titration table and calculate the difference to Supervisor.

## Question 2 Round all thermometer readings to the nearest 0.5 °C

#### Supervisor's Report

Calculate  $\Delta T/m$  correct to 2 d.p. for each experiment.

#### Candidate's scripts

Calculate  $\Delta T/m$  correct to 2 d.p. for each experiment.

Record values of  $\Delta T/m$  on script and use in assessing accuracy marks.

Where a candidate has performed one or both of the experiments a number of times (as distinct from adding in portions and recording the increasing temperature on each addition):

Calculate (unrounded) the  $\Delta T/m$  value for each experiment, then

Take the average of the closest pair, rounded to 2 d.p.

| Question | Sections              | Indicative material                                                                                                                                                                                                                                                                                                                                                                                            | Mark |     |
