## MARK SCHEME for the May/June 2013 series

## 9701 CHEMISTRY

9701/51

Paper 5 (Planning, Analysis and Evaluation), maximum raw mark 30

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2013 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

Page 2		Mark Scheme	Syllabus	Paper
		GCE AS/A LEVEL – May/June 2013	9701	51
Question	n	Expected Answer		Mark
1 (a) (i)	) (5	(Solubility will) decrease		
	D	Dissolving/reaction is exothermic so reaction shifts left (owtte).		
	Ir	Increase negates both marks.		
		<b>Ilow:</b> Variations in the wording but the word exothermic r the reverse process must be included.	or heat evolved	
(ii)	(ii) Axes are correctly labelled <b>AND</b> graph is a curve/straight line showing a decrease in solubility with temperature. (ignore units)			1
	Graph goes through the point 25 on temperature scale and 5 on solubility scale <b>AND</b> goes from 0 to 100 °C			1
	A	llow ecf from (i) prediction.		
(b)	(i	) temperature (increase)		
	(i	i) solubility (of chlorine)		1
<b>(c)</b> 1		ipette (5,10, 20, 25, 50 cm <sup>3</sup> ), burette (25, 50 or 100 cm <sup>3</sup> ) nark.	) both required for	1
2	2 s	tarch indicator AND blue/blue-black AND colourless/opa	aque.	1
3	вс	concentration of $C l_2 = 0.0704 \text{ mol dm}^{-3}$ .		1
4	re	alculates $M_r$ of Na <sub>2</sub> S <sub>2</sub> O <sub>3</sub> .5H <sub>2</sub> O as 248.2 <b>AND</b> calculates equired for a solution of stated concentration and volume oncentration)		1
5		lass and volume used must produce a solution twice as ne chlorine solution (ecf from $Cl_2$ ).	concentrated as	1
6		escribes making of solution in <u>volumetric flask</u> which mu issolving, making up <u>to mark</u> .	ust include:	1
7		itration is repeated to achieve concordant titration result concordant' not required if meaning clear.	s/average titre,	1
8	th	calculates moles $Cl_2$ in titration from 0.5 × moles thiosulfaterefore concentration <b>AND</b> concentration of $Cl_2$ in mold hlorine.		1
	C	llow any explanation which covers these points, calculat oncentrations or moles to mass and concentration in gd ormula that would produce a correct answer e.g. mv / n =	$m^{-3}$ , or any

	GCE AS/A LEVEL – May/June 2013	9701	51

(d)	Chlorine <b>OR</b> iodine are harmful Wear a mask/use a fume cupboard/for iodine if harmful to skin/eyes given, allow resistant gloves/goggles		1
			1
		רן	otal: 15]

	Page 4		Mark Sch	eme	Syll	abus	Paper
		G	SCE A LEVEL – M	ay/June 2013	97	<b>'01</b>	51
2	(a)	151.9 <b>AND</b> 1	8.0				1
	(b)	Columns are	headed with a labe	el, an expressior	and units as b	elow.	1
		Mol of FeSO₂	sig. figs.		1		
		ECF incorrect $M_{\rm r}$ . ECF the use of incorrect expressions into data.					
		D	E	F	G		
		FeSO₄ (C – A) / g	H <sub>2</sub> 0 B – C / g	FeSO <sub>4</sub> (C – A) / 151.9 OR D / 151.9 mol OR mole	H₂O (B – C) / 18 OR E / 18 mol OR mole		
		1.00	0.83	0.00658	0.0461		
		1.31	1.00	0.00862	0.0556		
		1.30	1.08	0.00856	0.0600	]	
		1.39	1.16	0.00915	0.0644		
		1.50	1.24	0.00987	0.0689		
		1.63	1.35	0.0107	0.0750		
		1.78	1.48	0.0117	0.0822		
		1.84	1.53	0.0121	0.0850		
		1.95	1.62	0.0128	0.0900		
		2.03	1.76	0.0134	0.0978		
	(c)	<i>x</i> -axis labelled 'mol of FeSO <sub>4</sub> ' and <i>y</i> -axis 'mol H <sub>2</sub> O' <b>AND</b> plotted points cover at least half the grid in both directions.					1
	Allow a correct letter from the table as a label.						
		All 10 points	plotted correctly.				1
		Best fit <b>straig</b>	<b>jht</b> line drawn.				1

	GCE A LEVEL – May/June 2013	9701	51

(d)	Points 2 and 10 circled. (The circled points must be unambiguously referred to in the reasons.)	1		
	Point 2 (mass of crucible 15.10) Not all the water had been driven off the iron sulfate crystals <b>OR</b> anhydrous FeSO <sub>4</sub> absorbed some water <b>OR</b> has an impurity that does not decompose.			
	Allow water loss is low(er) (than expected).			
	Point 10 (mass of crucible = 15.01) The anhydrous FeSO <sub>4</sub> had decomposed <b>OR</b> prior to heating the crucible/original sample was wet and water removed on heating <b>OR</b> contained an impurity which decomposed/was removed on heating.	1		
	Allow some mass lost (spits out) on heating.			
(e)	Appropriately drawn lines on the graph.	1		
	Correctly read values from the graph.	1		
	(Figures from the table allowed if no construction lines drawn providing graph drawn does actually go through the points used.)			
	Correctly calculated value of the slope given to 2 or more sig. figs up to calculator value and using the <b>candidate's</b> figures <b>AND</b> no units given.	1		
(f)	Most of the points are on the line <b>OR</b> only a few points are not on the line <b>OR</b> there are only a few anomalies.	1		
(g) (i)	(i) FeSO <sub>4</sub> .7H <sub>2</sub> O (ecf on slope in (e))			
(ii)	The gradient/slope is the ratio of (moles) of $H_2O$ :FeSO <sub>4</sub> (is 7 or 7:1).
