MARK SCHEME for the October/November 2006 question paper

9709 MATHEMATICS

9709/03

Paper 3, maximum raw mark 75

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

The grade thresholds for various grades are published in the report on the examination for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses.

• CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the October/November 2006 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

Mark Scheme Notes

Marks are of the following three types:

- M Method mark, awarded for a valid method applied to the problem. Method marks are not lost for numerical errors, algebraic slips or errors in units. However, it is not usually sufficient for a candidate just to indicate an intention of using some method or just to quote a formula; the formula or idea must be applied to the specific problem in hand, e.g. by substituting the relevant quantities into the formula. Correct application of a formula without the formula being quoted obviously earns the M mark and in some cases an M mark can be implied from a correct answer.
- A Accuracy mark, awarded for a correct answer or intermediate step correctly obtained. Accuracy marks cannot be given unless the associated method mark is earned (or implied).
- B Mark for a correct result or statement independent of method marks.
- When a part of a question has two or more "method" steps, the M marks are generally independent unless the scheme specifically says otherwise; and similarly when there are several B marks allocated. The notation DM or DB (or dep*) is used to indicate that a particular M or B mark is dependent on an earlier M or B (asterisked) mark in the scheme. When two or more steps are run together by the candidate, the earlier marks are implied and full credit is given.
- The symbol √ implies that the A or B mark indicated is allowed for work correctly following on from previously incorrect results. Otherwise, A or B marks are given for correct work only. A and B marks are not given for fortuitously "correct" answers or results obtained from incorrect working.
- Note: B2 or A2 means that the candidate can earn 2 or 0. B2/1/0 means that the candidate can earn anything from 0 to 2.

The marks indicated in the scheme may not be subdivided. If there is genuine doubt whether a candidate has earned a mark, allow the candidate the benefit of the doubt. Unless otherwise indicated, marks once gained cannot subsequently be lost, e.g. wrong working following a correct form of answer is ignored.

- Wrong or missing units in an answer should not lead to the loss of a mark unless the scheme specifically indicates otherwise.
- For a numerical answer, allow the A or B mark if a value is obtained which is correct to 3 s.f., or which would be correct to 3 s.f. if rounded (1 d.p. in the case of an angle). As stated above, an A or B mark is not given if a correct numerical answer arises fortuitously from incorrect working. For Mechanics questions, allow A or B marks for correct answers which arise from taking *g* equal to 9.8 or 9.81 instead of 10.

UNIVERSITY of CAMBRIDGE International Examinations The following abbreviations may be used in a mark scheme or used on the scripts:

- AEF Any Equivalent Form (of answer is equally acceptable)
- AG Answer Given on the question paper (so extra checking is needed to ensure that the detailed working leading to the result is valid)
- BOD Benefit of Doubt (allowed when the validity of a solution may not be absolutely clear)
- CAO Correct Answer Only (emphasising that no "follow through" from a previous error is allowed)
- CWO Correct Working Only often written by a 'fortuitous' answer
- ISW Ignore Subsequent Working
- MR Misread
- PA Premature Approximation (resulting in basically correct work that is insufficiently accurate)
- SOS See Other Solution (the candidate makes a better attempt at the same question)
- SR Special Ruling (detailing the mark to be given for a specific wrong solution, or a case where some standard marking practice is to be varied in the light of a particular circumstance)

Penalties

- MR -1 A penalty of MR -1 is deducted from A or B marks when the data of a question or part question are genuinely misread and the object and difficulty of the question remain unaltered. In this case all A and B marks then become "follow through √" marks. MR is not applied when the candidate misreads his own figures this is regarded as an error in accuracy. An MR-2 penalty may be applied in particular cases if agreed at the coordination meeting.
- PA -1 This is deducted from A or B marks in the case of premature approximation. The PA -1 penalty is usually discussed at the meeting.

	GCE A/AS LEVEL - OCT/NOV 2006	9709	03

	EITHE	R: State or imply non-modular inequality $-0.5 < 3^x - 8 < 0.5$, or $(3^x - 8)^2 < (0.5)^2$, or		
		corresponding pair of linear equations or quadratic equation	B1	
		Use correct method for solving an equation of the form $3^{x} = a$, where $a > 0$	ML	
		Obtain critical values 1.83 and 1.95, or exact equivalents	A1	
		State correct answer $1.83 \le x \le 1.95$	A1	
	OR:	Use correct method for solving an equation of the form $3^x = a$, where $a \ge 0$	MI	
		Obtain one critical value, e.g. 1.95, or exact equivalent	Al	
		Obtain the other critical value 1.83, or exact equivalent State correct answer $1.83 \le x \le 1.95$	A1 A1	4
		[Do not condone \leq for $<$. Allow final answer given in the form 1.83 $< x$, (and) $x < 1.95$.] [Exact equivalents must be in terms of ln or logarithms to base 10.]	A	
		[SR: Solutions given as logarithms to base 3 can only earn M1 and B1 of the first scheme.]		
2	EITHE	R: Use tan 2.4 formula and obtain a horizontal equation in tan x	M1	
		Simplify the equation to the form $3\tan^2 x = 1$, or equivalent	A1	
		Obtain answer 30°	AL	
		Obtain second answer 150° and no others in the range	AL	
	OR:	Use sin 2A and cos 2A formulae and obtain a horizontal equation in sin x or cos x	M1	
		Simplify the equation to $4\sin^2 x = 1, 4\cos^2 x = 3$, or equivalent	A1	
		Obtain answer 30°	A1	
		Obtain second answer 150° and no others in the range	A1	4
		[Ignore answers outside the given range.] [Treat answers in radians as a MR and deduct one mark from the marks for the angles.]		
		[Methods leading to an equation in $\cos 3x$ or $\cos 2x$, or to the equality of two tangents		
		can also earn M1A1, and then A1 + A1 for 30° and 150° only.]		
		[SR: If the answer 30° is found by inspection or from a graph, and is exactly verified, award	d B2.	
		If a second answer 150° is found and verified, and no others stated, award B2.]		
3	(i) Stat	If a second answer 150° is found and verified, and no others stated, award B2.] is derivative is $6 e^x - 3 e^{3x}$	B1
