May/June 2011

2 hours

Additional Materials: As listed in the Confidential Instructions.

READ THESE INSTRUCTIONS FIRST

DO **NOT** WRITE IN ANY BARCODES.

You may lose marks if you do not show your working or if you do not use appropriate units.

You are reminded of the need for good English and clear presentation in your answers.

The number of marks is given in brackets [] at the end of each question or part question.

For Examiner's Use

Total	

This document consists of **11** printed pages and **1** blank page.

You may not need to use all of the materials provided.

For
Examiner's
Use

- 1 In this experiment you will investigate how the motion of two pendulums depends on the tension in a spring connecting them.

- (a) Measure and record the unstretched length l_0 of the coiled part of the spring as shown in Fig. 1.1.

Fig. 1.1

$l_0 = \dots\dots\dots$ [1]

- (b) (i) Set up the apparatus as shown in Fig. 1.2.

Fig. 1.2

- (ii) Position the stands so that the coiled part of the spring has approximate length $l_0 + 2\text{ cm}$ (so that the spring is extended by approximately 2 cm).

- (iii) Measure and record the length l of the coiled part of the spring.
Calculate the extension x of the spring, where $x = l - l_0$.

For
Examiner's
Use

$l =$

$x =$

- (iv) Gently pull bob A towards you. Release the bob and watch the movement of the two bobs.

Bob A will eventually stop and start moving again. It will then stop for a second time.

Determine and record the time T between these two stops.

$T =$ [2]

- (c) By moving the stands further apart, repeat **(b)(iii)** and **(b)(iv)** until you have six sets of readings of l , x and T , with x in the range $2\text{ cm} \leq x \leq 10\text{ cm}$.

[9]

- (d) (i) Plot a graph of T on the y -axis against x on the x -axis.
 (ii) Draw the straight line of best fit.
 (iii) Determine the gradient and y -intercept of this line.

[3]

[1]

gradient =

y -intercept =

[2]

Examiner's
Use

- (e) It is suggested that the quantities T and x are related by the equation

$$T = px + q$$

where p and q are constants.

Use your answers in (d)(iii) to determine the values of p and q .

Give appropriate units.

$$p = \dots\dots\dots$$

$$q = \dots\dots\dots$$

[1]

- (f) Use your values in (e) to determine the extension x that would be expected to give a value of $T = 75\text{ s}$.

$$x = \dots\dots\dots$$

BLANK PAGE

Please turn over for Question 2.

You may not need to use all of the materials provided.

For
Examiner's
Use

- 2 In this experiment you will drop a mass onto a rod standing in sand and investigate the distance that the rod moves into the sand.

- (a) You have been provided with two wooden rods of different diameters. Measure and record the diameter d of the **thicker** rod.

$d = \dots\dots\dots$ [2]

- (b) Flatten the surface of the sand. Stand the rod vertically in the sand up to the mark drawn on the rod, as shown in Fig. 2.1.

Fig. 2.1

- (c) (i) Hold the mass hanger so that the distance h between its bottom and the top of the rod is approximately 10 cm. The centre of the bottom of the mass hanger should be vertically above the wooden rod, as shown in Fig. 2.2.

For
Examiner's
Use

Fig. 2.2

- (ii) Measure and record the height h .

$h = \dots\dots\dots$ [1]

- (d) (i) Drop the mass hanger from this height h above the rod.

- (ii) **Without making a further mark on the rod**, determine the new length x of the rod below the surface of the sand, as shown in Fig. 2.3.

Fig. 2.3

$x = \dots\dots\dots$ [1]

- (iii) Calculate and record the change in depth y of the rod in the sand as a result of the impact of the mass hanger.

For
Examiner's
Use

$y = \dots\dots\dots$ [1]

- (e) Estimate the percentage uncertainty in your value of y .

percentage uncertainty = $\dots\dots\dots$ [1]

- (f) Using the **thinner** rod repeat (a), (b), (c)(i), and (d).
Use the same value of h as in (c)(ii).

$d = \dots\dots\dots$

$x = \dots\dots\dots$

$y = \dots\dots\dots$

[3]

- (g) It is suggested that the quantities y and d are related by the equation

$$y = \frac{k}{d^2}$$

where k is a constant.

- (i) Using your data, calculate two values of k .

first value of k =

second value of k =

[1]

- (ii) Explain whether your results support the suggested relationship.

.....

 [1]

- (iii) Justify the number of significant figures that you have given for your values of k .

.....

 [1]

For
Examiner's
Use

- (h) (i) Describe four sources of uncertainty or limitations of the procedure for this experiment.

For
Examiner's
Use

1.

.....

2.

.....

3.

.....

4.

.....

[4]

- (ii) Describe four improvements that could be made to this experiment. You may suggest the use of other apparatus or different procedures.

1.

.....

2.

.....

3.

.....

4.
