UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

GCE Advanced Subsidiary and Advanced Level

MARK SCHEME for the November 2005 question paper

9698 PYCHOLOGY

9698/01

Paper 1 (Core Studies 1)

maximum raw mark 100

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which Examiners were initially instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began. Any substantial changes to the mark scheme that arose from these discussions will be recorded in the published *Report on the Examination*.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the *Report on the Examination*.

The minimum marks in these components needed for various grades were previously published with these mark schemes, but are now instead included in the Report on the Examination for this session.

• CIE will not enter into discussion or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the November 2005 question papers for most IGCSE and GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

13	Fror	n the study by Hraba and Grant on doll choice:		
	(a)	What is meant by the term ethnocentrism?		
		Tendency to under-value out-group (1 mark) and over-value in- group (2 nd mark). Must have 2 parts for 2 marks.	2	
	(b)	Give <u>two</u> ways in which the children were ethnocentric.		1
		White children preferred to play with the white doll (Q1); thought that the white doll was a nice doll (Q2). Thought the black doll looked bad (Q3). Black children same as above but for black doll. On Q4 black children believe black is a nice colour (no diff for whites).		
		1 mark partial, 2 marks full.	2	[4]
14	In th	ne study by Rosenhan (sane in insane places):		I
	(a)	Who were the pseudopatients?		
		Most likely: people who volunteered to claim they were hearing voices when they were not. Specifics not needed (e.g. 3 psychologists, 1 housewife, etc).		
		2 marks for correct answer.	2	
	(b)	Who were the participants?		
-		Most likely: doctors (psychiatrists), nurses and ward attendants at the various mental hospitals.		
		2 marks for correct answer.	2	[4]
15	Thig	pen and Cleckley (multiple personality disorder) used a num	per of t	ests:
	(a)	Identify <u>one</u> psychometric test and <u>one</u> projective test that we the study.	were u	sed in
		Most likely psychometric = IQ test. Projective test = Rorschach test. 1 mark for naming each.		
		Allow memory, not EEG.	2	
	(b)	Describe the findings of either the psychometric or the proje	ective t	est.
		Most likely: IQ eve white IQ 110, eve black 104 Projective:		
		Repression in eve white; regression in eve black. 1 mark partial, 2 marks full.	2	[4]

Partial/full answer

0 marks	no answer or incorrect answer
1 mark	partially correct answer or correct but incomplete lacking sufficient detail or
	explanation to demonstrate clear understanding
2 marks	correct answer with sufficient detail/explanation to demonstrate clear understanding

Page 5	Mark Scheme	Syllabus	Paper
	GCE AS/A LEVEL – NOVEMBER 2005	9698	1

SECTION B

Que	stion	Description	marks
16	and exper	physiological approach considers how our hormones, nervous functions of the brain interact to determine our behaviorience.	
	Raine	chter and Singer (emotion). e, Buchsbaum and LaCasse (brain scans). y (split brain).	
	(a)	Describe what physiological processes are measured in your c study.	hosen
		Schachter: interaction of physiological functions (e.g. adrenaline and this hormone has on body) and cognitive functions. Raine: functions of various parts of the brain such as amygdala in e Sperry: hemispheric lateralisation and all that encompasses e.g. vis pathways from LVF/RVF to visual cortex. Functions of corpus callo transfers between hemispheres.	motion. ual
		No answer or incorrect answer.	0
		Anecdotal evidence, general statements, minimal detail, minimal focus.	1-3
		Attempt to outline some of main findings though with omission of detail or lack of clarity (comment with some comprehension).	4-6
		Main findings identified and described in good detail. Outline is clear, focused and well expressed. Good selection of findings.	7-10
		max mark.	[10]
	(b)	Outline the main findings of your chosen study.	
		Schachter: P's in a state of physiological arousal for which the immediate explanation will label that state in relation to cognitions a (such as how another person behaves). This happened in epi misi ign groups. It did not happen in epi inf and placebo groups. Raine: NGRI less activity in prefrontal and parietal areas, more in no difference in temporal. Sperry: lots of results. Main: those presented with image to on visual field could only recognise it if it was presented to same visual presented to opposite, p's respond as if it has never been seen.	vailable s and epi occipital, e half of
		No answer or incorrect answer.	0
		Anecdotal description of generalisations, brief detail, minimal focus.	1-3
		Appropriate generalisations identified, description shows some understanding. Some detail and expansion of generalisations.	4-6
		Appropriate generalisations identified. Description is clear, has good understanding, is focused and well expressed. Good detail, each generalisation explained fully.	7-10
		max mark.	[10]

Page 6	Mark Scheme	Syllabus	Paper
	GCE AS/A LEVEL – NOVEMBER 2005	9698	1

(c)	Using your chosen study as an example, what are the strengths and weaknesses of the physiological approach?	
	 Adv – use of recording devices allows precise and accurate measuren Adv – data is objective/'scientific' and so replication and comparison. Adv – human physiology is the same in all cultures. Not influenced by learning or other factor. Disadv – equipment may be imprecise and give false readings. Disadv – study will reduce ecological validity – must be done in lab. Disadv – is reductionist – not always good to isolate specific functions. Humans more than physiology. 	
	No answer or incorrect answer.	0
	Anecdotal description, brief detail, minimal focus. Very limited range. Description may be inaccurate, incomplete or muddled.	1-3
	Advantages or disadvantages only which are focused on question. For 4 marks as for 6-7 mark band. For 5 marks as for 8-10 mark band.	4-5
	Several advantages and disadvantages which are focused on question. Description is good with reasonable understanding. Some detail and expansion of key features.	6-7
	Balance of advantages and disadvantages which are focused on question. Description is detailed with good understanding and clear expression. The arguments are well considered and reflect understanding which extends beyond the specific study.	8-10
	max mark.	[10]
(d)	Suggest an alternative way of gathering data for your chosen study and say what effect, if any, this would have on the results.	
	No answer or incorrect answer.	0
	Anecdotal suggestion, brief detail, minimal reference to question. Description may be inaccurate, incomplete or muddled.	1-3
	Some appropriate suggestions which are focused on question. Description shows some understanding. Some detail and expansion of aspects allowing generalisation.	4-6
	Range of appropriate suggestions which are focused on question. Description is detailed with good understanding and clear expression. The changes are well considered and reflect understanding of the area in question.	7-1
	max mark.	[10]

ſ

(c)	Using your chosen study as an example, what are the advantages a disadvantages of carrying out studies in everyday environments?		
	Adv – participants familiar with surroundings and comfortable more li relax.	kely to	
	 Adv – behaviour is more likely to be natural. Adv – external influences will be as usual e.g. noises. Ecological whigh. Disadv – more difficult to control all variables. Disavd – lower reliability – if repeated may get different results. Disadv – may be difficult to isolate behaviour and remove usual noise distractions. 	-	
	No answer or incorrect answer.	0	
	Anecdotal description, brief detail, minimal focus. Very limited range. Description may be inaccurate, incomplete or muddled.	1-3	
	Advantages or disadvantages only which are focused on question. For 4 marks as for 6-7 mark band. For 5 marks as for 8-10 mark band.	4-5	
	Several advantages and disadvantages which are focused on question. Description is good with reasonable understanding. Some detail and expansion of key features.	6-7	
	Balance of advantages and disadvantages which are focused on question. Description is detailed with good understanding and clear expression. The arguments are well considered and reflect understanding which extends beyond the specific study.	8-10	
	max mark.	[10]	
(d)	Suggest an alternative way of gathering data for your chosen study and say what effect, if any, this would have on the results.		
	No answer or incorrect answer.	0	
	Anecdotal suggestion, brief detail, minimal reference to question. Description may be inaccurate, incomplete or muddled.	1-3
