UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS International General Certificate of Secondary Education

CHEMISTRY 0620/03

Paper 3

May/June 2006

1 hour 15 minutes

Candidates answer on the Question Paper. No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name in the spaces at the top of this page. Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

Answer all questions.

A copy of the Periodic Table is printed on page 16.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

| For Examiner's Use | | |

This document consists of 16 printed pages.

| Iron i | is a | transition element. | |
|--------|------|---|--------|
| (a) \ | Whi | ich of the following statements about transition elements are correct? | |
| - | Tick | k three boxes. | |
| - | The | e metals are highly coloured e.g. yellow, green, blue. | |
| - | The | e metals have low melting points. | |
| - | The | eir compounds are highly coloured. | |
| - | The | eir compounds are colourless. | |
| - | The | e elements and their compounds are often used as catalysts. | |
| - | The | ey have more than one oxidation state. | |
| | | | [3] |
| (b) (| (i) | In which Period in the Periodic Table is iron to be found? | |
| | | | [1] |
| (| (ii) | Use the Periodic Table to work out the number of protons and the num neutrons in one atom of iron. | ber of |
| | | number of protons = number of neutrons = | [1] |
| | | is extracted in a blast furnace. The list below gives some of the substances ormed in the extraction. | sused |
| | са | rbon monoxide coke iron ore limestone sla | g |
| | (i) | Which substance is a mineral containing largely calcium carbonate? | |
| | | | [1] |
| (| (ii) | Which substance is formed when impurities in the ore react with calcium oxid | |
| | | | [1] |
| (i | ii) | Which substance is also called hematite? | |
| | | | [1] |

1

| (d) | State two functions of the coke used in the blast furnace. | |
|-----|---|---------|
| | | [2] |
| (e) | Most of the iron is converted into mild steel or stainless steel. Give one use for each. | |
| | mild steel | |
| | stainless steel | [2] |

2 Some reactions of metals W, X, Y and Z are given below.

| metal | reaction with water | reaction with dilute hydrochloric acid |
|-------|---|--|
| w | A few bubbles form slowly in cold water. | Vigorous reaction. Gas given off. |
| Х | Vigorous reaction. Metal melts. Gas given off. | Explosive reaction. Should not be attempted. |
| Y | No reaction. | No reaction. |
| Z | Does not react with cold water. Hot metal reacts with steam. | Steady fizzing. |

| (a) | Arrange these metals in order of reactivity. | | |
|-----|--|-----------------|-----|
| | most reactive | | |
| | | | |
| | | | |
| | least reactive | | [2] |
| (b) | Which of these | metals could be | |
| | (i) magnesiur | m, | |
| | | | [1] |
| | (ii) copper? | | |
| | | | [1] |

[2]

(c) The equation for the reaction of **X** with cold water is given below.

$$2X(s) + 2H_2O(l) \longrightarrow 2XOH(aq) + H_2(g)$$

| (i) | Describe the test you would use to show that the gas evolved is hydrogen. |
|-----|---|
| | |

| | | [1] |
|-----|---|-----|
| ii) | How could you show that the water contained a compound of the type X OH? | |
| | | |

| (iii) | In which group of the Periodic Table does metal X belong? | |
|-------|--|-----|
| | | [1] |

| (iv) | The ore of X is its chloride. | Suggest how metal X could be extracted from i | its |
|------|--------------------------------------|---|-----|
| | chloride. | | |

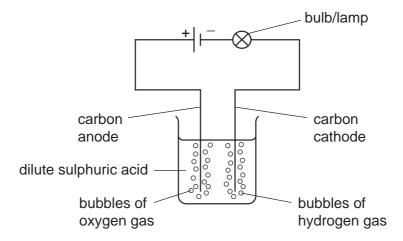

3 (a) Four bottles were known to contain aqueous ammonia, dilute hydrochloric acid, sodium hydroxide solution and vinegar, which is dilute ethanoic acid. The bottles had lost their labels. The pH values of the four solutions were 1, 4, 10 and 13.

Complete the table.

| solution | рН |
|---------------------------|----|
| aqueous ammonia | |
| dilute hydrochloric acid | |
| sodium hydroxide solution | |
| vinegar | |

[2]

(b) The following apparatus was set up to investigate the electrical conductivity of dilute acids.

Dilute sulphuric acid is a strong acid. If it was replaced by a weak acid, what **two** differences in the observations would you expect to make?

| | | |
|------|------|------|
| | | |

(c) When nitric acid is added to water the following reaction occurs.

$$HNO_3 + H_2O \longrightarrow NO_3^- + H_3O^+$$

Give the name and the formula of the particle which is transferred from nitric acid to water.

name _____

formula [2]

| | | | 7 |
|-----|-------|--|---|
| (d) | Thi | s question is concerned with | the following oxides. |
| | | aluminium oxide | Al_2O_3 |
| | | calcium oxide | CaO |
| | | carbon dioxide | CO ₂ |
| | | carbon monoxide | CO |
| | | magnesium oxide | MgO |
| | | sulphur dioxide | SO ₂ |
| | (i) | Which of the above oxides sodium hydroxide? | will react with hydrochloric acid but not with aqueous |
| | | | [1] |
| | (ii) | Which of the above oxides hydrochloric acid? | will react with aqueous sodium hydroxide but not with |
| | | | [1] |
| (| (iii) | Which of the above oxides sodium hydroxide? | will react both with hydrochloric acid and with aqueous |
| | | | [1] |

(iv) Which of the above oxides will react neither with hydrochloric acid nor with

aqueous sodium hydroxide?

[1]

| 4 | The | first three elements in Group IV are carbon, silicon, germanium. | | |
|---|-----|---|--------------|--------------|
| | (a) | The element germanium has a diamond-type structure. germanium. A diagram is acceptable. | Describe the | structure of |

| | | | [2] |
|-----|------|---|-----|
| (b) | Unl | ike diamond, graphite is soft and is a good conductor of electricity. | |
| | (i) | Explain why graphite has these properties. | |
| | | | |
| | | | |
| | | | [3] |
| | (ii) | Give a use of graphite that depends on one of these properties. | |
| | | property | |
| | | use | [1] |
| (c) | | bon dioxide and silicon(${ m IV}$) oxide have similar formulae but different types icture. | of |
| | (i) | Give the formulae of these oxides. | |
| | | | [1] |
| | (ii) | How are their structures different? | |
| | | | |
| | | | [2] |
| (d) | hyd | these elements form compounds with hydrogen called hydrides. The saturativides of carbon are the alkanes. Predict the formula of the hydride of germanic ch contains two germanium atoms. | |

[1]

5 Sulphuric acid is made by the Contact process in the following sequence of reactions.

$\textbf{sulphur} \rightarrow \textbf{sulphur dioxide} \rightarrow \textbf{sulphur trioxide} \rightarrow \textbf{sulphuric acid}$

(a) (i) How is sulphur dioxide made from sulphur?

______[1

(ii) Sulphur dioxide has other uses. Why is it used in the manufacture of paper?

[1]

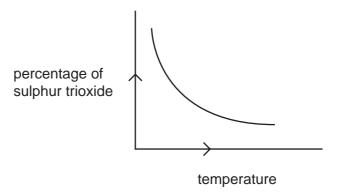

(iii) How does it preserve food?

[1]

(b) The equation for a stage of the Contact process is

$$2SO_2 + O_2 \rightleftharpoons 2SO_3$$

The percentage of sulphur trioxide in the equilibrium mixture varies with temperature.

(i) How does the percentage of sulphur trioxide in the equilibrium mixture vary as the temperature increases? Circle the correct answer.

increases stays the same decreases [1]

(ii) Is the forward reaction in the equilibrium $2SO_2 + O_2 \rightleftharpoons 2SO_3$ exothermic or endothermic? Give a reason for your choice.

[2]

[Turn over

| (iii) | Explain, mentioning both rate and percentage yield, why the temperature used the Contact process is 450°C. | d in |
|-------|--|------|
| | | [2] |
| (iv) | Describe how the sulphur trioxide is changed into concentrated sulphuric acid. | |
| | | |
| | | [2] |

6 (a) Exothermic reactions produce heat energy.

An important fuel is methane, natural gas. The equation for its combustion is as follows.

(i) In chemical reactions bonds are broken and new bonds are formed. Using this reaction give an example of

| • |
|---|

a bond that is formed. [2]

(ii) Explain, using the idea of bonds forming and breaking, why this reaction is exothermic, that is it produces heat energy.

(b) Some radioactive isotopes are used as nuclear fuels.

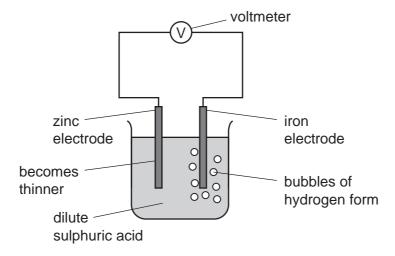

(i) Give the symbol and the nucleon number of an isotope that is used as a nuclear fuel.

[2]

(ii) Give another use of radioactive isotopes.

______[1]

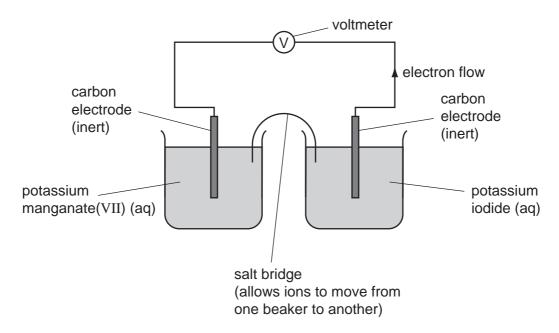

- (c) Cell reactions are both exothermic and redox. They produce electrical energy as well as heat energy.
 - (i) The diagram shows a simple cell.

Which substance in this cell is the reductant and which ion is the oxidant?

| | reductant | |
|------|--|------|
| | oxidant | [2] |
| (ii) | How could the voltage of this cell be increased? | |
| | | [1] |
| iii) | What is the important large scale use, relating to iron and steel, of this type of reaction? | cell |
| | | [1] |

(d) Cells can be set up with inert electrodes and the electrolytes as oxidant and reductant.

The potassium manganate(VII) is the oxidant and the potassium iodide is the reductant.

| (i) | Describe the colour change that would be observed in the left hand beaker. | |
|------|--|----|
| | | [2 |
| (ii) | Write an ionic equation for the reaction in the right hand beaker. | |
| | | [2 |

[2]

7 The fractional distillation of crude oil usually produces large quantities of the heavier fractions. The market demand is for the lighter fractions and for the more reactive alkenes. The heavier fractions are cracked to form smaller alkanes and alkenes as in the following example.

$$C_8H_{18}$$
 \longrightarrow C_4H_{10} + C_4H_8 octane butenes

(a) (i) Write a different equation for the cracking of octane.

$$C_8H_{18} \longrightarrow \qquad + \qquad \qquad [1]$$

(ii) The cracking of octane can produce isomers with the molecular formula C_4H_8 . Draw the structural formulae of two of these isomers.

(b) (i) Give the essential condition for the reaction between chlorine and butane.

[1]

(ii) What type of reaction is this?

[1]

(iii) This reaction produces a mixture of products. Give the names of **two** products that contain four carbon atoms per molecule.

and _____

| (c) | Alkenes are more reactive than alkanes and are used to make a range of organic chemicals. Propene, CH ₃ –CH=CH ₂ , is made by cracking. Give the structural formula of the addition product when propene reacts with the following. |
|-----|---|
| | (i) water |
| | (ii) bromine |
| (d) | [1] Propene reacts with hydrogen iodide to form 2-iodopropane. |
| . , | $CH_3-CH=CH_2$ + HI \longrightarrow $CH_3-CHI-CH_3$ |
| | 1.4 g of propene produced 4.0 g of 2-iodopropane. |
| | Calculate the percentage yield. |
| | moles of CH ₃ –CH=CH ₂ reacted = |
| | maximum moles of CH ₃ -CHI-CH ₃ that could be formed = |
| | mass of one mole of CH_3 – CHI – CH_3 = 170 g |
| | maximum mass of 2- iodopropane that could be formed = |
| | percentage yield% [4] |
| | |
