

UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS International General Certificate of Secondary Education

CANDIDATE			
NAME			
CENTRE		CANDIDATE	
NUMBER		NUMBER	
CUEMICTOV			0000/04
CHEMISTRY			0620/21
Paper 2		Oct	ober/November 2012
			1 hour 15 minutes
Candidates ans	swer on the Question Paper.		
No Additional M	laterials are required.		

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name in the spaces at the top of this page. Write in dark blue or black pen.

You may need to use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

A copy of the Periodic Table is printed on page 16.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

For Examiner's Use

This document consists of 13 printed pages and 3 blank pages.

1 The diagram shows the structures of five compounds, A, B, C, D and E, containing carbon.

Α	В	С	D	E
o=c=o	Cl Cl Cl Cl	C = C	H C H	H H H—C—C—O—H H H

(a) Answer these questions using the letters A, B, C, D or E. Each compound can be used once, more than once or not at all.

Which one of these compounds

[Total: 10]

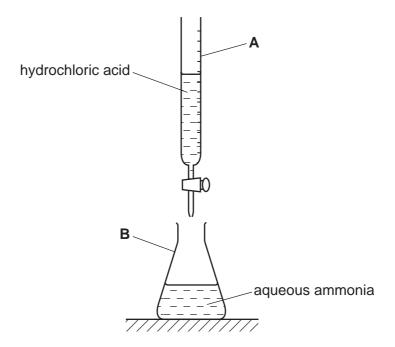

catalyst[1]

- **2** Hydrogen chloride, HC*l*, is an acidic gas.
 - **(a)** Draw a dot and cross diagram of a molecule of hydrogen chloride. Show only the outer electrons.

[2]

(b) Hydrogen chloride dissolves in water to form a solution of hydrochloric acid.

A student titrated aqueous ammonia with hydrochloric acid using the apparatus shown below.

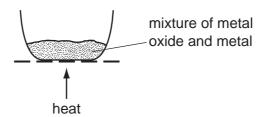

(i) State the name of the pieces of apparatus labelled **A** and **B**.

A is a	 [1]	
B is a	[1]	

(ii) Describe how the pH value of the solution in **B** changes as hydrochloric acid is added until the acid is in excess.

((iii)	Com	plete	e the	word	l and s	symbo	ol equ	ıatior	ns for	this	reacti	on.				
			amı	monia	+	hydrod	chloric	acid	\rightarrow								
					+		HC1		\rightarrow		Ν	IH₄C <i>1</i>					[2]
(c)	Des	cribe	wha	at hap	pen	sed to s whe	en you	u add	l aqu	ieous		monia	to a s	olutio	n of c	opper	(II)

3 The reactivity of different metal oxides was compared by heating them with metals in a crucible.

The results are shown in the table below.

mixture	observations
iron oxide + zinc	reacts
lead oxide + iron	reacts
magnesium oxide + zinc	no reaction

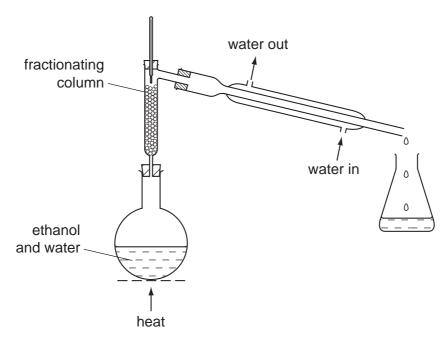

(a) (i) Use the results in the table to suggest the order of reactivity of the metals iron, lead, magnesium and zinc.

most reactive ————————————————————————————————————	→ least reactive
(ii) Predict whether iron will react with zinc oxide. Explain your answer.	[2]
	[1]
(b) Which two of the following statements about metals are correct Tick two boxes.	!?
Metals conduct electricity and heat.	
All Group IV elements show metallic properties.	
Magnesium is extracted by heating its oxide with carbon.	
All metals have high densities. Iron is a transition element.	
	[2]

(c)	Sand and salt	(sodium chloride)	are both solids.
-----	---------------	-------------------	------------------

(i)	Describe the arrangement and movement of the particles in a solid.	
	arrangement	
	movement	[2]
(ii)	Describe how you could separate the sand from a mixture of sand and salt. Give full details of how this is carried out.	
		••••
		••••
		[3]

(d) The diagram below shows the apparatus used to separate ethanol and water from a mixture of ethanol and water.

Complete the following sentences about this separation using words from the list below.

condenser	crystallisation	distillation	flask	heavy		
higher	lower	solid	volatile	vapour		
Fractional	is used	I to separate a	mixture of water	and ethanol. The		
$temperature\ at\ the\ top\ of\ the\ fraction ating\ column\ is\\ than\ the\ temperature$						
at the bottom. Th	e more	liquid ev	aporates and mov	ves further up the		
column. It eventua	ally reaches the	V	vhere the	changes		
to a liquid.				[5]		

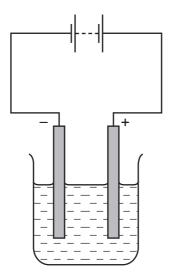

[Total: 15]

Lith	ium has two naturally-occurring isotopes, 6_3 Li and 7_3 Li.	
(a)	What do you understand by the term isotope?	
		[1]
(b)	Draw a labelled diagram to show the atomic structure of an atom of $^{7}_{3}\text{Li}$.	
	Show the particles in the nucleus as well as the electrons.	
		[5]
(c)	Lithium reacts with oxygen to form lithium oxide, Li ₂ O. Complete the equation for this reaction.	
	Li +Li ₂ O	

[3]

4

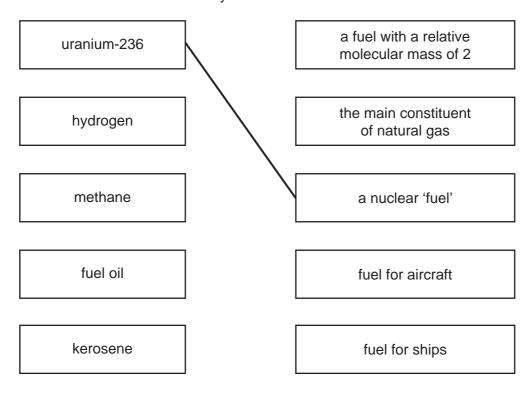

(d) Aqueous lithium chloride is electrolysed using the apparatus shown below.

- (i) On the diagram above, label:
 - the electrolyte
 - the anode. [2]
- (ii) What do you understand by the term aqueous?
 - [1]
- (iii) Explain why aqueous lithium chloride is able to conduct electricity.
 - [11]

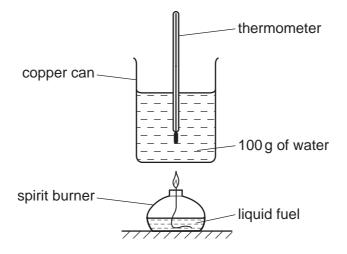

[Total: 13]

5 (a) Match the fuel on the left with the information on the right. The first one has been done for you.

[4]

(b) Two students investigated some fuels to find which gave off the most energy. They tested four liquid fuels using the apparatus shown below.

(i) In each experiment, the amount of fuel burnt was the same. Suggest **one** other factor that should be kept the same in each experiment.

.....[1]

(ii) The students used the thermometer to stir the water. Suggest why it is important to keep the water stirred.

......[1]

(iii) The results are shown in the table below.

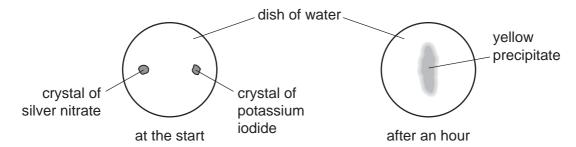

fuel	initial temperature of the water/°C	final temperature of the water/°C
ethanol	24	40
propanol	24	42
paraffin	22	33
petroleum spirit	20	40

		Which fuel transfers the most energy to the water? Explain your answer.	
(c)		is needed for fuels to burn. e pie chart below shows the composition of the air.	[2]
		mainly argon	
	Stat	te the name of	
	gas	A,	
	gas	В	[2]
(d)	Arg	on is a noble gas.	
	(i)	State one use for argon.	
			[1]
	(ii)	To which period in the Periodic Table does argon belong?	
			[1]
	(iii)	Describe the chemical properties of argon.	
			[1]

[Total: 13]

- A student placed a crystal of silver nitrate and a crystal of potassium iodide in a dish of water.

 After an hour she observed that
 - the crystals had disappeared,
 - a yellow precipitate had appeared near the middle of the dish.

a)	Use your knowledge of the kinetic particle theory and reactions between ions to explain these observations.
	[4]

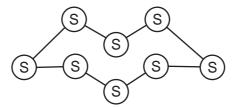

(b) Potassium iodide reacts with aqueous chlorine. Complete the equation for this reaction.

2KI +
$$\rightarrow$$
KC l + I_2

[2]

[Total: 6]

7 The diagram shows one molecule of sulfur.

(a)	How many atoms are there in three molecules of sulfur?
	[1]
(b)	Calculate the relative molecular mass of sulfur.
	[1]
(c)	Explain how acid rain is formed when fossil fuels containing sulfur are burnt. In your answer, include
	 the name of a fossil fuel which contains sulfur, the gas formed when sulfur burns, the reactions which lead to the formation of acid rain.
	[4]
(d)	Potassium sulfate can be used as a fertiliser. The potassium in this fertiliser is an important element for plant growth. Name two other elements , important for plant growth, which are present in most fertilisers.
	and [2]
(e)	Describe a test for sulfate ions.
	test
	result[2]
	[Total: 10]
