0653/33

October/November 2012

1 hour 15 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs, tables or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer **all** questions.

A copy of the Periodic Table is printed on page 24.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

For Examiner's Use

This document consists of **23** printed pages and **1** blank page.

1 Flowers are organs in which sexual reproduction takes place.

(a) Sexual reproduction can be defined as:

"the process involving the fusion of haploid nuclei to form a diploid zygote and the production of genetically dissimilar offspring."

(i) Explain the meaning of the term *diploid*.

.....
..... [1]

(ii) State the scientific term for the fusion of two nuclei. [1]

(b) Fig. 1.1 shows a section through a flower.

Fig. 1.1

(i) State the **letter** of the part in which

the male gametes are produced,

a zygote is produced.

[2]

- (ii) Explain how the structure of the flower in Fig. 1.1 indicates that it is pollinated by insects.

*For
Examiner's
Use*

.....

.....

.....

.....

.....

..... [3]

- (c) After pollination, seeds are produced. A student set up an experiment to investigate the conditions needed for the germination of lettuce seeds.

For
Examiner's
Use

He placed five lettuce seeds on cotton wool in each of five test-tubes. Fig. 1.2 shows the conditions present in each tube.

Fig. 1.2

Table 1.1 shows his results.

Table 1.1

tube	number of seeds that germinated
A	5
B	0
C	5
D	0
E	0

What conclusions can the student make from these results?

.....

.....

.....

..... [3]

Please turn over for Question 2.

- 2 Fig. 2.1 represents what happens when calcium carbonate, an **insoluble** ionic salt, is added to water.

For
Examiner's
Use

Fig. 2.1

- (a) Sodium chloride is a **soluble** ionic salt.

On Fig. 2.2, sketch how the ions from sodium chloride are arranged after it is added to water.

Fig. 2.2

[2]

- (b) Explain, in terms of relative numbers of protons and electrons, why calcium ions have an electrical charge of 2+, but sodium ions have a charge of 1+.

For
Examiner's
Use

.....

.....

.....

.....

..... [3]

- (c) The formula of a sodium ion is Na^+ . The formula of a carbonate ion is CO_3^{2-} .

Use this information to deduce the chemical formula of sodium carbonate.

Show how you arrived at your answer.

.....

..... [2]

- 3 Fig. 3.1 shows two speed / time graphs for a car.

Fig. 3.1

- (a) Describe the motion of the car in

graph A,

graph B. [1]

- (b) The car travels at 20 m/s for 90 seconds.

The total force driving the car forward is 1000 N.

- (i) Calculate the work done by this force during this 90 second journey.

State the formulae that you use and show your working.

formulae used

working

..... [3]

For
Examiner's
Use

- (ii) Calculate the useful power output of the engine during this time.

State the formula that you use and show your working.

formula used

working

For
Examiner's
Use

..... [2]

- (c) The car accelerates from 0 to 33 m/s in 11 seconds.

Calculate the acceleration of the car during the 11 seconds.

Show your working.

..... [2]

- 4 Bats use echo location to detect objects around them. To do this, they emit ultrasound.

For
Examiner's
Use

- (a) (i) Ultrasound is sound that has a frequency too high for a human to hear.

Suggest a frequency for the ultrasound emitted by bats. [1]

- (ii) Underline the word or words that correctly describe an ultrasound wave.

electromagnetic **longitudinal** **transverse** [1]

- (b) Most bats drink by flying close to the surface of a pond and taking mouthfuls of water from it.

Researchers thought that bats may be able to tell where water is present because the water has a much smoother surface than the surrounding ground. They put several thirsty bats into a closed room. They placed sheets of two rough materials and two smooth materials on the floor.

rough materials	smooth materials
metal grid	metal sheet
tree bark	smooth wood

The researchers counted the number of times the bats tried to drink from the surface of each material. Their results are shown in Fig. 4.1.

Fig. 4.1

- (i) Compare the results for the rough materials and the smooth materials.

.....

 [2]

- (ii) The ultrasound waves reflect from surfaces and are detected by receptors in the bat's head.

For
Examiner's
Use

Fig. 4.2 shows how ultrasound waves are reflected from a rough surface and from a smooth surface. The arrows show the direction in which the sound waves travel.

Fig. 4.2

Use the information in Fig. 4.1 and Fig. 4.2 to suggest how bats detect a water surface.

.....

.....

.....

..... [2]

- (c) The droppings of bats are used as a fertiliser in many parts of the world. They contain large quantities of nitrate and phosphate, which plants need for healthy growth.

However, if more fertiliser is added to the soil than the crop plants can absorb, some of the fertiliser may wash into rivers when it rains.

Explain how this can cause fish to die.

.....

.....

.....

.....

..... [3]

- 5 Metallic copper is a very important material that has been extracted from copper compounds for thousands of years.

For
Examiner's
Use

- (a) Copper is used to make electrical wires.

Copper wires are connected to the mains electrical supply using brass plugs. Brass is an alloy of copper and zinc, and is a much less malleable material than pure copper.

Draw a simple diagram of the atoms in brass, and use it to help you explain why brass is less malleable than pure copper.

.....

.....

.....

..... [3]

- (b) One of the processes used in the extraction of copper involves heating copper(I) sulfide, Cu_2S , in air. One of the reactions that occurs is between copper(I) sulfide and oxygen. This reaction produces copper and sulfur dioxide, SO_2 .

Construct a balanced symbolic equation for this reaction.

..... [1]

- (c) Small metallic objects can be covered with a thin layer of copper metal (copper plated) using electrolysis.

For
Examiner's
Use

Fig. 5.1 shows the apparatus a student used to cover a steel spoon with copper.

Fig. 5.1

In this process, aqueous copper ions, Cu^{2+} , move from the electrolyte and are converted into atoms of metallic copper on the surface of the steel spoon.

- (i) Explain why the steel spoon must be made the cathode in this process.

.....

 [2]

- (ii) Describe, in terms of ions, electrons and atoms, what happens at the surface of the spoon that results in the building up of a layer of metallic copper.

.....

 [3]

6 Fig. 6.1 shows a washing machine.

For
Examiner's
Use

Fig. 6.1

(a) Complete the sentence below using **two** of the words in the list.

heat kinetic light potential sound

A washing machine is designed to transform electrical energy into
energy and energy. [2]

(b) (i) Some of the water inside the washing machine evaporates.

Explain the process of evaporation in terms of particles.

.....
.....
.....
..... [2]

(ii) Explain why evaporation has a cooling effect.

.....
..... [1]

(iii) The water inside the washing machine is heated by an electric heater.

Describe how heat energy is able to pass through the metal parts of the heater.

.....
.....
..... [2]

- (c) The casing of the washing machine is a solid. The water used in it is a liquid.

Complete the diagrams below to show the arrangement of particles in a solid and in a liquid.

solid

liquid

[2]

- (d) Before buying a washing machine, a person may research several types to find out which washing machine has the greatest energy efficiency.

Explain the meaning of the term *efficiency*.

.....
..... [1]

For
Examiner's
Use

- 7 (a) Fig. 7.1 shows two human teeth.

For
Examiner's
Use

Fig. 7.1

- (i) Name the **two** types of teeth shown in Fig. 7.1.

tooth **A**

tooth **B** [2]

- (ii) Explain how tooth **B** helps to digest a food such as bread.

.....

 [2]

- (b) Bread contains starch. Starch molecules are very large, and must be broken down into smaller sugar molecules before they can be absorbed. This is done by enzymes.

- (i) Name **one** part of the alimentary canal in which starch is broken down.

..... [1]

- (ii) Name the part of the alimentary canal where the sugar molecules are absorbed into the blood.

..... [1]

- (c) Fig. 7.2 shows how pH affects the activity of the enzyme that breaks down starch in the human alimentary canal.

For
Examiner's
Use

Fig. 7.2

Explain the reasons for the differences in activity of the enzyme at pH 5 and pH 7.

.....

.....

.....

.....

..... [3]

8 Carbon occurs naturally as an element and also in a very large number of compounds.

- (a) (i) The most common atom of carbon has a proton number of 6 and a nucleon number of 12.

Draw a diagram of **one** atom of this isotope of carbon. Label the positions and numbers of the protons, neutrons and electrons.

For
Examiner's
Use

[2]

- (ii) Fig. 8.1 shows diagrams of particles in some substances. In these diagrams, different circles are used to represent different types of atoms.

Fig. 8.1

Explain which of the diagrams, **P**, **Q**, **R** and **S**, represent elements and which represent compounds.

diagram(s) representing elements

explanation

.....

diagram(s) representing compounds

explanation

.....

[4]

- (b) Petroleum (crude oil) is the raw material from which gasoline (car fuel) is obtained.

For
Examiner's
Use

- (i) The extraction of gasoline from petroleum includes the process of fractional distillation.

Explain whether fractional distillation involves physical or chemical changes.

main type of change

explanation

..... [1]

(ii) Fig. 8.2 shows a simplified diagram of industrial fractional distillation.

Fig. 8.2

Explain, in terms of molecules, why gasoline boils at a higher temperature than refinery gas.

.....

 [2]

(c) Some car manufacturers are researching the use of alternative fuels to replace gasoline.

One possible alternative fuel is hydrogen gas, H_2 , which is oxidised in the car's engine.

Explain why air pollution caused by car engines would be greatly reduced if hydrogen could be used as the fuel instead of gasoline.

.....

 [3]

- 9 (a) Fig. 9.1 shows an electrical circuit for a torch (flashlight).

For
Examiner's
Use

Fig. 9.1

- (i) How many cells are fitted in the torch? [1]

- (ii) A voltmeter is used to check the voltage across the light bulb.

Draw the symbol for the voltmeter in the correct position on the circuit. [1]

- (iii) The current passing through the light bulb was 0.3A when the voltage across it was 6V.

Calculate the resistance of the light bulb.

Show your working and state the formula that you use.

formula used

working

..... [2]

- (b) A single ray of light from a torch is shone onto a mirror as shown in Fig. 9.2.

Fig. 9.2

- (i) On Fig. 9.2, label the angle of incidence and angle of reflection. [1]
- (ii) The angle of incidence = 45° .

Write down the value of the angle of reflection. [1]

For
Examiner's
Use
