UNIVERSITY of CAMBRIDGE International Examinations

**1** Fig. 1.1 shows the arrangement of electrons in a lithium atom.

(a) Lithium and potassium are both Group I metals. Complete the diagram in Fig. 1.2 to show the arrangement of electrons in a potassium atom.

- [2]
- (b) When a small piece of lithium is dropped into a trough half filled with water a reaction takes place. Bubbles of the gas hydrogen are given off slowly and lithium hydroxide is formed.
  - (i) Write a balanced equation for this reaction.

(ii) Describe how you could prove that the gas given off is hydrogen. test result

1.	
2.	
	[2]

- **2** A ray of light enters a rectangular glass block at an angle of incidence of 66°. The glass has a refractive index of 1.45.
  - (a) Calculate the angle of refraction for this ray of light. Write down the equation that you use and show all your working.

[3]

(b) Draw a fully labelled diagram to show the refraction of the light as it enters and leaves the glass block.

**3** Copper(II) oxide reacts with dilute sulphuric acid.

 $CuO + H_2SO_4 \longrightarrow CuSO_4 + H_2O$ 

In the preparation of copper(II) sulphate, copper(II) oxide is added to  $20 \text{ cm}^3$  of sulphuric acid of 1.0 mol/dm<sup>3</sup> concentration until no more reacts.

- (a) (i) Calculate the number of moles in the  $20 \text{ cm}^3$  of sulphuric acid.
- moles of sulphuric acid = [1] (ii) How many moles of copper(II) sulphate are produced in the reaction? moles of copper(II) sulphate = [1] (iii) Calculate the relative formula mass,  $M_r$ , of copper(II) sulphate, CuSO<sub>4</sub>. Show your working. *M*<sub>r</sub> = [2] (iv) Calculate the mass of copper(II) sulphate, CuSO<sub>4</sub>, formed. Show your working. mass = \_\_\_\_\_g [2] (b) Describe how crystals of copper(II) sulphate can be prepared from the mixture of excess copper(II) oxide and copper(II) sulphate solution obtained when the reaction stops. [3]

- 4 A player throws a ball, of mass 0.15 kg, horizontally. The ball has a constant acceleration for a time of 0.10s and then moves at a constant speed of 20.0 m/s for 0.80 s before being caught and brought to rest in a further time of 0.30 s. As the ball is caught it decelerates non-uniformly.
  - (a) On Fig. 4.1 draw a graph showing the speed of the ball from when it was thrown until the time it came to rest.

- [4]
- (b) Calculate the maximum kinetic energy of the ball. Show all your working.

maximum kinetic energy = [3]

(c) Calculate the acceleration of the ball during the first 0.10 s. Write down the equation that you use and show all your working.

acceleration = [3]

----

5

6

(a) When hydrogen burns the only product is water.Write a balanced equation for the burning of hydrogen.

			[2]			
(b)	<ul> <li>b) When petrol is burned in a car engine a number of products are formed. Some of these products cause pollution. These include carbon monoxide and oxides of nitrogen.</li> </ul>					
	(i)	How are the oxides of nitrogen removed from the exhaust gases of modern cars.				
			[1]			
	(ii)	Why may the presence of carbon monoxide in car exhaust systems cause a heaproblem?	alth			
			[1]			
(c)	lt h Sug	as been suggested that hydrogen may replace petrol as a fuel for cars. ggest one advantage and one disadvantage of using hydrogen instead of petrol.				
	adv	vantage				
	disa	advantage				
			[2]			

[2]

7

(b) Fig. 6.1 shows a method of measuring the mass of a uniform loaded ruler. The ruler is pivoted at the 18 cm mark.

(i) The ruler is uniform. What does this tell you about the position of its centre of mass?

..... ......[1]

(ii) The total length of the ruler is 80 cm. The 50 g mass is hung from the 8 cm mark on the ruler. Calculate the mass of the ruler. Show all your working.

mass of ruler = \_\_\_\_\_ g [4]

7 Powdered calcium carbonate is added to excess hydrochloric acid of three different concentrations, **A**, **B** and **C**.

 $CaCO_3 + 2HCl \longrightarrow CaCl_2 + CO_2 + H_2O$ 

In each experiment the same mass of powder is used and the acid is at the same temperature.

The volume of carbon dioxide gas given off is measured at time intervals. The results of these experiments are shown in Fig. 7.1.

Fig. 7.1

(i) Which of the three solutions of hydrochloric acid, A, B or C, is the most concentrated?
[1]
(ii) Explain how Fig. 7.1 shows your answer to (i) is correct.
[2]
(iii) Why do each of the three experiments give the same total volume of gas?
[1]
(b) A fourth experiment is carried out using hydrochloric acid solution A and the same mass of powdered calcium carbonate. This time the experiment is carried out at a higher temperature.

Sketch on Fig. 7.1 the result you would expect for this fourth experiment.

[2]

(c) (i) Calculate the number of moles in the 100 cm<sup>3</sup> of carbon dioxide gas produced. (Assume the volume of carbon dioxide is measured at r.t.p. The volume of one mole of any gas is 24 dm<sup>3</sup> at r.t.p.).

moles of carbon dioxide = [1]

(ii) Calculate the number of moles of calcium carbonate used to produce 100 cm<sup>3</sup> of carbon dioxide gas.

moles of calcium carbonate = [1]

(iii) Calculate the mass of calcium carbonate used to produce 100 cm<sup>3</sup> of carbon dioxide gas.
 Show your working.
 (The relative formula mass, *M*<sub>r</sub>, of calcium carbonate = 100.)

mass of calcium carbonate = \_\_\_\_\_g [2]

For Examiner's Use

(a) (i) Name the process by which the Sun produces energy.

	[1]
(ii)	Explain what happens in this process.
	[3]
(b) Cal res The	Iculate the energy released in the Sun when its mass decreases by 1200 kg as a ult of this process. Write down the equation you use and show all your working. e speed of light = $3.0 \times 10^8 \text{ m/s}$ .
	energy released =J [4]
Fig. 9.1	shows the graphical formulae of five organic compounds.
н—	$\begin{array}{cccccccccccccccccccccccccccccccccccc$
	A B C
	H = C = C H = H = H = H = H = H = H = H

Ε

(a)	(i)	Which <b>two</b> compounds are alkanes?
		[1]
	(ii)	Which compound dissolves in water to give an acidic solution?
		[1]
(b)	(i)	Describe a test to distinguish between compounds <b>C</b> and <b>D</b> .
		test
		result
		[2]
	(ii)	In industry compound <b>D</b> is made from compound <b>C</b> . Name the type of reaction that is used.
		[1]
(c)	Cor Dra	mpound <b>D</b> can be used to make a polymer. w the structure for this polymer.

[2]

**10** Fig. 10.1 shows a circuit with a high resistance voltmeter being used to measure the e.m.f. of a cell.

Fig. 10.1

(a) Explain why the voltmeter must have a high resistance if it is to measure an accurate value of the e.m.f.

[2]

(b) Fig. 10.2 shows a cell with an internal resistance of 5  $\Omega$ . A voltmeter which has a resistance of 995  $\Omega$  is connected across the cell. The e.m.f. of the cell is 1.50 V.

(i) Calculate the current in the circuit.

current = \_\_\_\_\_A [3]

(ii)	13 Calculate the potential difference across the voltmeter.	For Examiner's Use
	potential difference = V [2]	
(iii)	Explain why this voltmeter gives a good approximation to the e.m.f. of the cell.	
	[2]
