**PHYSICAL SCIENCE** 

0652/03

Paper 3 (Extended)

October/November 2007

1 hour 15 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

## **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs, tables or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer all questions.

A copy of the Periodic Table is printed on page 16.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

| For Exam | iner's Use |
|----------|------------|
| 1        |            |
| 2        |            |
| 3        |            |

This document consists of 14 printed pages and 2 blank pages.

1 Fig. 1.1 shows the speed of a car as it moves along a straight, level track.

For Examiner's Use

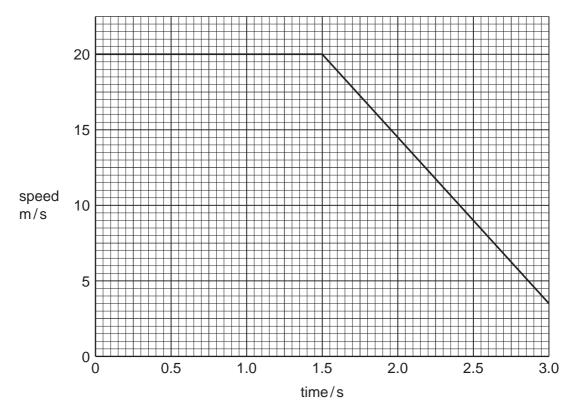

Fig. 1.1

| (a) | During the first 1.5 s the car travels at a constant speed.    |
|-----|--|
|     | State the overall force on the car during this period of time. |

(b) Calculate the acceleration of the car between 1.5 s and 3.0 s.

(c) The mass of the car is 1200 kg.
Calculate the braking force on the car between 1.5 s and 3.0 s.

**2** Fig. 2.1 shows a view from above as a set of ripples move out from a point when a stone is thrown into a pond.

For Examiner's Use

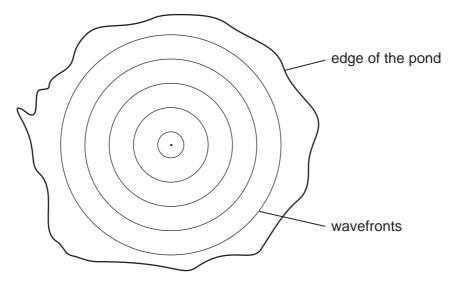

Fig. 2.1

- (a) (i) Mark on Fig. 2.1 one wavelength and label it  $\lambda$ .
  - (ii) A boy counts 12 waves hitting the bank in 5.0 s. Calculate the frequency of the waves.

| frequency = |  |
|-------------|--|
|-------------|--|

(iii) The wavelength of the waves is 0.40 m. Calculate the speed at which the waves move.

**(b)** The water is shallower near the bank and the waves slow down. Suggest what effect that this will have on

(i) the wavelength of the waves,

(ii) the frequency of the waves.

the frequency of the waves.
[2]

**3** A student reacts the same mass of calcium carbonate with excess of the same hydrochloric acid solution at different temperatures.

For Examiner's Use

At each temperature he measures the time taken for all of the calcium carbonate to react.

His results are shown in Fig. 3.1.

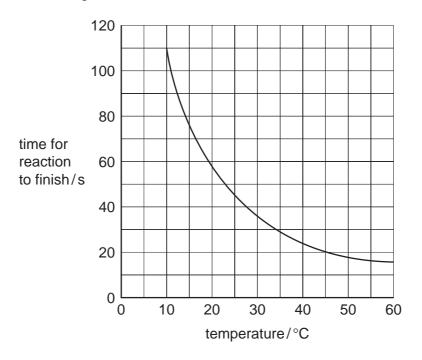

Fig. 3.1

| (a) | (i)  | Describe the effect of change in temperature on the rate of this reaction. |      |
|-----|------|--|------|
|     |      |  |      |
|     |      |  | [2]  |
|     | (ii) | State two other factors that may affect the rate of a reaction.            |      |
|     |      | 4  |      |
|     |      | 1.   | •••• |
|     |      | 2.   | [2]  |

5 **(b)** At a higher temperature the particles have more energy to react. Energy may also be supplied by light. This happens in the process called photosynthesis. (i) Plants use photosynthesis to make glucose. Name the reactants and the other product of photosynthesis. reactants and other product [3] (ii) What enables the energy from sunlight to be absorbed in this process? [1] (iii) The process is speeded up by the presence of an enzyme. What is an enzyme? **(c)** Energy from light is also used in photography. Photographic film contains the compound silver bromide. When light falls on the film a photochemical reaction takes place.

For Examiner's Use

Silver metal is formed, creating a black area on the film.

What type of reaction have the silver ions undergone?

**4** Fig. 4.1 shows a ray of light entering a parallel sided glass block.

For Examiner's Use

[1]

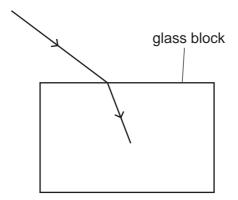

Fig. 4.1

- (a) Complete the path of the light through and as it leaves the block.
- **(b)** Calculate the value of the angle of refraction if the glass has a refractive index of 1.54 and the angle of incidence is 53.1°.

Show your working.

angle of refraction = \_\_\_\_\_ [4]

|---------------------|---|--|-----|--|--|
| Copper              | and aluminium are two commonly used           | d metals.                                  |     |  |  |
| (a) Co <sub>1</sub> | Copper is a metal that can be found 'native'. |  |     |  |  |
| (i)                 | Explain this meaning of the term nativ        | æ.   |     |  |  |
|                     |   |  |     |  |  |
|                     |   |  | [1] |  |  |
| (ii)                | Name <b>one</b> other metal that is common    | nly found native.                          |     |  |  |
|                     |   |  | [1] |  |  |
| (iii)               |   | s of copper and the properties on which    |     |  |  |
|                     | Tabl  | e 5.1                                      |     |  |  |
|                     | use of copper                                 | property of copper                         |     |  |  |
|                     |   |  |     |  |  |
|                     |   |  |     |  |  |
|                     |   |  | [4] |  |  |
|                     |   |  |     |  |  |
| <b>(b)</b> Alu      | minium is not found native. It is found a     | as a compound.                             |     |  |  |
| (i)                 | The main ore of aluminium contains the        | ne compound aluminium oxide.               |     |  |  |
|                     | Name this ore.                                |  |     |  |  |
|                     |   |  | [1] |  |  |
| (ii)                | Aluminium foil is used for food contain       | ners.                                      |     |  |  |
|                     | Aluminium is a fairly reactive metal, be      | ut aluminium foil does not react with foo  | od. |  |  |
|                     | Explain why.                                  |  |     |  |  |
|                     |   |  |     |  |  |
|                     |   |  | [1] |  |  |
| (iii)               | State another use of aluminium, and           | explain why it is a good metal for this us | se. |  |  |
|                     | use   |  |     |  |  |
|                     | explanation                                   |  |     |  |  |

[2]

For Examiner's Use

**6** Fig. 6.1 shows a design for a battery charger, which is made up from a transformer and component **P**.

For Examiner's Use

(a) (i) Name component P.

| (ii) | Explain why <b>P</b> is needed in the circuit. |
|------|--|
|      |  |

| b) | Explain how the transformer converts an input voltage into a different output voltage. |
|----|--|
|    |  |
|    |  |
|    |  |

(c) The primary coil has 1800 turns.
Calculate the number of turns in the secondary coil.

(d) A battery takes 3 hours to charge with an average current of 200 mA. Calculate the total charge delivered.

[4]

7 Table 7.1 gives information about some of the elements in Group II of the Periodic Table.

Table 7.1

| element   | atomic<br>number | formula of oxide | melting point in °C | reaction with cold water |
|-----------|------------------|------------------|---------------------|--------------------------|
| magnesium | 12               | MgO              | 649                 | slow                     |
| calcium   | 20               | CaO              | 839                 | steady                   |
| strontium | 38               | SrO              | 769                 | rapid                    |
| barium    | 56               | BaO              | 725                 |                          |

| (a) | Thr   | ee of these elements show a trend in a <b>physical</b> property.  |     |
|-----|-------|---|-----|
|     | (i)   | Describe this physical trend.   |     |
|     |       |   |     |
|     |       |   | [2] |
|     | (ii)  | Which element does not fit in with this trend?  |     |
|     |       |   | [1] |
| (b) | The   | e elements in Table 7.1 show a trend in a <b>chemical</b> property.   |     |
|     | Des   | scribe this chemical trend.   |     |
|     |       |   |     |
|     |       |   | [2] |
| (c) |       | en a small piece of calcium is added to cold water, a steady stream of bubbles<br>en off. This is hydrogen gas.                 | is  |
|     |       | en the reaction is completed, a test with Universal Indicator shows the water re a pH of 12. Calcium hydroxide has been formed. | to  |
|     | (i)   | Write a balanced symbol equation for the reaction of calcium with cold water.   |     |
|     |       |   | [2] |
|     | (ii)  | What does the test with Universal Indicator show about the properties of calciulation hydroxide?                                | ım  |
|     |       |   | [1] |
|     | (iii) | What would you <b>see</b> when a small piece of barium is added to cold water?  |     |
|     |       |   |     |
|     |       |   | [2] |

**8** Fig. 8.1 shows the structure of a cathode ray tube.

For Examiner's Use

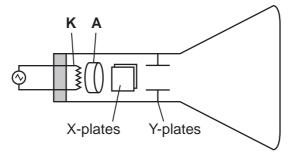

Fig. 8.1

| (a) | Explain how parts <b>K</b> and <b>A</b> produce cathode rays. |
|-----|---|
|     |   |
|     |   |
|     |   |
|     |   |
|     | [4]   |

**(b)** Fig. 8.2 shows an experiment to measure the speed of sound. Two microphones are placed 8.0 m apart and connected to a cathode ray oscilloscope. A loudspeaker is placed in front of them.

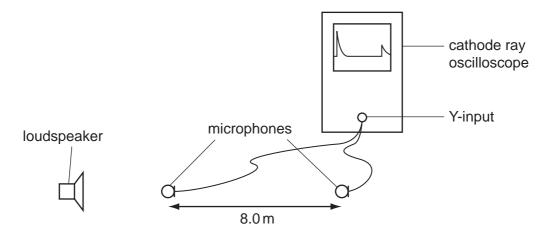

Fig. 8.2

The loudspeaker produces a sharp pulse of sound which is detected by the microphones and displayed on the cathode ray oscilloscope screen.

Fig. 8.3 shows the screen in more detail. The time base is set to 5 ms/square.

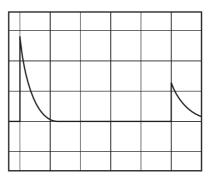

Fig. 8.3

(ii) Calculate the speed of the sound.

| 9 | Copper(II) oxide reacts with dilute sulphuric acid according to the following equation. |
|---|---|
|   | $CuO + H_2SO_4 \longrightarrow CuSO_4 + H_2O$   |
|   | A student uses this resetion to manage another of some of TV substant                   |

For Examiner's Use

A student uses this reaction to prepare crystals of copper(II) sulphate.

| (i) | Explain why an excess of crystals. | f copper(II) oxide | must be used to | ensure purity | of the |
|-----|------------------------------------|--------------------|-----------------|---------------|--------|
|     |                                    |                    |                 |               |        |

(a) To make sure that the crystals are pure, an excess of copper(II) oxide must be used.

....

(ii) The student uses  $10.0\,\mathrm{g}$  of copper(II) oxide and  $100\,\mathrm{cm}^3$  of  $1.0\,\mathrm{mol}\,/\,\mathrm{dm}^3$  sulphuric acid.

Show by calculation that the copper(II) oxide is in excess.

[A<sub>r</sub>: Cu, 64; O,16.]

[4]

| (b) | Describe how the student should carry out the preparation to obtain pure, dry crystals of copper(II) sulphate. |
