Paper 2 Core

May/June 2006

1 hour 15 minutes

Candidates answer on the Question Paper. No Additional Materials are required.

#### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in. Write in dark blue or black pen.

Do not use staples, paper clips, highlighters, glue or correction fluid.

Answer all questions.

You may use a pencil for any diagrams, graphs, tables or rough working.

A copy of the Periodic Table is printed on page 20.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

This document consists of 17 printed pages and 3 blank pages.

1 (a) Each box below contains a description of a solid, a liquid or a gas.

Join each box to the correct diagram. One has been done for you.

[2]

**(b)** A student sets up the apparatus shown in Fig. 1.1. He wants to use this apparatus to detect thermal radiation.

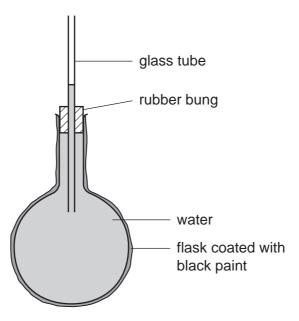

Fig. 1.1

(i)	Describe what the student would observe when the flask coated with black pair exposed to a source of thermal radiation.	nt is
		[1]
(ii)	Explain the observation in (i) in terms of water particles.	
		[3]
iii)	Suggest why the flask is coated with black paint.	
		[1]

**2** Fig. 2.1 shows a fetus developing in the uterus.

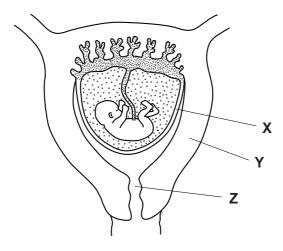

Fig. 2.1

[3]
[3]

- **3 (a)** Table 3.1 shows some information about the elements in Group VII of the Periodic Table. Use the Periodic Table on page 20 to help you with this question.
  - (i) Complete the table.

Table 3.1

Period in which the element is found	symbol	physical state at 25 °C
	Cl	
	Br	
	I	

[2]

			[2]
	(ii)	Fluorine is the Group VII element in Period 2. Suggest the physical state of fluorine at 25 °C.	
			[1]
(b)		mine exists as diatomic molecules, $\mathrm{Br}_2$ . Bromine molecules react with magnesims to form magnesium bromide.	um
	(i)	State the type of chemical bonding in bromine molecules.	
			[1]
	(ii)	The formula of magnesium bromide is MgBr <sub>2</sub> . Explain what is meant by this formula.	
			[1]
(c)	(i)	State <b>one</b> element which is often added to water intended for drinking.	
			[1]
	(ii)	Suggest and explain what might happen if the element you have named in (i) we not added to water intended for drinking.	/as
			••••
			[2]

**4** (a) A radioactive tracer can be used to detect leaks in water pipes.

The tracer is placed in the water flowing through the pipe and a radiation detector is used to check for radiation coming from water leaking out of the pipe.

	(i)	Suggest a suitable instrument for detecting the radiation.	
			[1]
	(ii)	State two precautions which should be taken when handling and storing radioactive tracer.	the
		1.	
		2.	[2]
(b)	Bet	a-radiation is one form of ionising radiation.	
	(i)	Explain why beta-radiation is said to be ionising.	
			[2]
	(ii)	Explain why ionising radiation can be harmful to humans.	
			[2]

` '	nplete the flow chart by filling in the missing words.
	During nuclear fission energy is released.
	<u></u>
	This energy is used to change water into
	This causes a to turn which then turns a generator.
	[3]
(d) (i)	The voltage of the electricity generated is increased using transformers for transmission through power lines to the users.
	Explain why this is done.
	[2]
(ii)	The electrical supply to a house is at a voltage of 220 V. An electric kettle is plugged into the supply. The current flowing through the heating element of the kettle is 10 A.
	Calculate the resistance of the heating element.
	Show your working and state the formula that you use.

	working
	ohms [2]

- 5 (a) The list below contains descriptions of some different parts of cells.
  - A contains genes made of DNA
  - **B** controls what enters and leaves the cell
  - **C** is fully permeable

Write the **letter** or **letters** of the descriptions that fit each of these parts of cells. Each part may have one letter, two letters or no letters at all.

nucleus		
cell wall		
chloroplast		
cell surface	membrane	 [3]

(b) Fig. 5.1 shows a cell from a plant root.

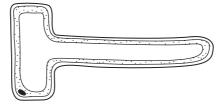

Fig. 5.1

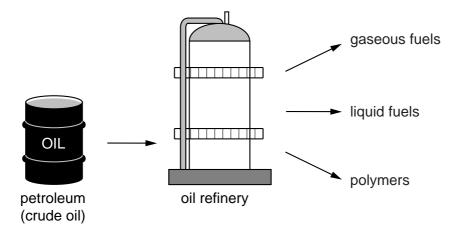

This cell takes up water from the soil.

The water is than carried up to the leaves in the xylem vessels.

(i)	Name the type of cell in Fig. 5.1.	
		[1]
(ii)	Explain how this cell is adapted for its function.	
		[1]

(iii)	In the leaves, a small amount of the water is used for photosynthesis. Write the word equation for photosynthesis.	
		[2]
(iv)	What happens to most of the water after it has travelled into the leaves?	
		[1]

6 Petroleum (crude oil) provides many important products including fuels and polymers.

(a)	Name	the	two	main	elements	which	are	always	found	combined	together	in	fuels
	obtaine	ed fr	om p	etroleu	ım.								

<b>[2</b>	1
	J

- (b) Butane is a gaseous fuel obtained from petroleum.
  - (i) State **one** form of energy that is transferred to the surroundings when butane is oxidised.

F4.	
11	ı
ъ.	J

(ii) Name one product that is formed when butane is completely oxidised.

[1	1
 ь.	-

(c) Table 6.1 shows the total number of atoms which are combined in molecules of three compounds A, B and C.

Table 6.1

compound	Α	В	С
number of atoms in one molecule	60 000	11	26

Suggest and explain which one of these compounds is a polymer.	
	••••
	[2]

` '	Compounds containing the element sulphur are usually removed from fuels obtained rom petroleum. The sulphur is collected and used to make sulphuric acid.									
(i)	State the number of sulphur atoms in one molecule of sulphuric acid.									
	[1]									
(ii) Explain why the removal of sulphur compounds from fuel reduces er damage.										
	[3]									

# 7 Fig. 7.1 shows sugar cane growing in Fiji.

Fig. 7.1

(a)	) In Fiji, much of the land is hilly. It often rains very hard.						
	With reference to Fig. 7.1, explain how the fields of sugar cane can help to reduce so erosion.	oil					
	[2	2]					
(b)	Would a field of sugar cane have a low species diversity or a high species diversity? Explain your answer.						
	ro	 21					
	[2	-]					

(c)		Sugar cane is used to produce sugar, which can be used in cooking. A man eats a cake containing sugar.						
	(i)	Describe how the sugar is absorbed into his blood.						
		[2]						
	(ii)	Explain how his blood sugar level will be prevented from rising too high after he has eaten the cake.						
		[3]						
(	(iii)	Explain why he would feel tired and ill if his blood sugar level dropped very low.						
		[0]						

- 8 The element iron is extracted from iron ore, which is a rock found in the Earth's crust.
  - (a) The main iron compound in iron ore is iron oxide. When iron oxide reacts with carbon monoxide, iron is produced. The word equation for this reaction is shown below.

iron oxide + carbon monoxide → iron + carbon dioxide

State <b>one</b> difference between an element such as iron and a compound such a iron oxide.
[1
The reaction shown in (a) is an example of oxidation and reduction.
State and explain briefly which substance has been reduced in this reaction.

(b) Fig. 8.1 shows a diagram of a car.

(i)

(ii)

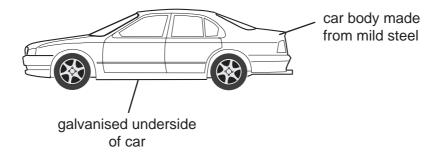

Fig. 8.1

Mild steel is an alloy containing a large amount of iron.

(i) Name an element, other than iron, which is present in mild steel.

[1]

(ii)	The steel on the underside of the car is galvanised by coating it with a layer of zing. This protects the steel from rusting.					
	Suggest how this prevents the steel from rusting.					
	[3]					

(c) Fig. 8.2 shows a test-tube containing a small piece of galvanised steel reacting in sulphuric acid.

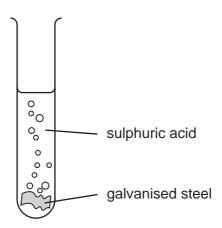

Fig. 8.2

Suggest the names of two salts which will remain in the solution in the test-tube when all of the galvanised steel has reacted.

1.	
2.	[2

**9** (a) An athlete takes part in a race. His performance is shown on the speed–time graph in Fig. 9.1.

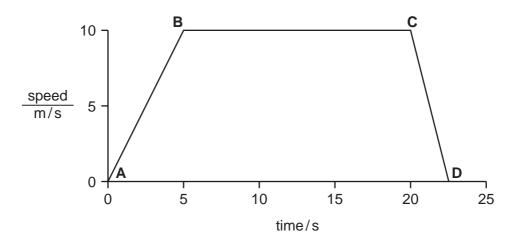

Fig. 9.1

Use the graph to describe the motion of the athlete between

- (i) **A** and **B**,
- (ii) B and C,

**(b)** Calculate the distance travelled between 5 seconds and 20 seconds.

Show your working and state the formula that you use.
