Paper 3 (Extended)

October/November 2007

1 hour 15 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs, tables or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** questions.

A copy of the Periodic Table is printed on page 24.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

For Examiner's Use

Total	

This document consists of **21** printed pages and **3** blank pages.

1 Hydrogen peroxide, H_2O_2 , is a colourless liquid.

Hydrogen peroxide decomposes according to the equation below.

(a) State the total number of atoms which are bonded in one molecule of hydrogen peroxide.

..... [1]

(b) Complete the bonding diagram below to show

- the chemical symbols of the elements in a molecule of water,
- the arrangement of the outer electrons of each atom.

[2]

(c) Fig. 1.1 shows apparatus which a student used to measure the rate at which hydrogen peroxide decomposes.

Fig. 1.1

The student measured the time for a known volume of oxygen gas to collect in the measuring cylinder.

Table 1.1 shows results the student obtained for four experiments, **A**, **B**, **C** and **D**.

Table 1.1

experiment	volume of oxygen gas collected /cm ³	time taken for oxygen to collect /seconds
A	40	35
B	40	15
C	40	10
D	40	25

For
Examiner's
Use

- (i) State and explain in which experiment, **A**, **B**, **C** or **D**, the reaction rate was the highest.

.....

 [1]

- (ii) State and explain, in terms of particles, **one** variable (factor) which the student could have changed in order to obtain the results shown in Table 1.1.

.....

 [3]

2 Fig. 2.1 shows the inside of a refrigerator.

For
Examiner's
Use

Fig. 2.1

(a) (i) Draw arrows on Fig. 2.1 to show what happens to the air cooled by the freezing compartment. [1]

(ii) Use the idea of density to explain why this happens.

.....

 [2]

(b) When the refrigerator is used for 60 minutes, 360 000 joules of electrical energy are converted.

(i) How many joules of energy are converted per second?

..... joules [1]

(ii) What is the power of the refrigerator?

..... [1]

(c) The refrigerator has two lamps inside. The supply voltage is 240 V and the current passing through each lamp is 0.04 A.

For
Examiner's
Use

(i) Show that the resistance of one lamp is $6000\ \Omega$.

State the formula that you use and show your working.

formula used

working

[1]

(ii) The lamps are connected together in parallel.

Calculate the combined resistance of the two lamps.

State the formula that you use and show your working.

formula used

working

..... [3]

3 Fig. 3.1 shows a plant, and also a cell from part of the plant.

Fig. 3.1

(a) From which part of the plant, **A**, **B**, **C** or **D**, does the cell come?

.....

[1]

(b) On the diagram of **the cell** in Fig. 3.1, label the following structures.

Use label lines and the appropriate letters.

P a partially permeable membrane

Q the part of the cell that contains DNA

R a part of the cell that contains a substance whose molecules contain magnesium

[3]

(c) When a leaf is tested for starch, it is first boiled in water and then put into hot alcohol.

Explain why these steps are necessary.

boiling in water

.....

putting into hot alcohol

..... [2]

(d) Part A of the plant in Fig. 3.1 is a flower.

(i) Is this an insect-pollinated or a wind-pollinated flower?

Explain your answer.

type of pollination

explanation

..... [1]

(ii) Some pollen from one of the flowers on this plant is transferred onto the stigma of another flower on the same plant. The male gamete in the pollen fertilises a female gamete in the flower.

Is this asexual reproduction or sexual reproduction?

Explain your answer.

type of reproduction

explanation

..... [1]

(iii) Explain why a plant breeder may prefer to use an asexual method of propagation of his plants, rather than a sexual method.

.....

.....

..... [2]

- 4 The apparatus in Fig. 4.1 can be used to study the reaction between potassium and oxygen.

For
Examiner's
Use

Fig. 4.1

- (a) Suggest why the flask becomes warm during the reaction.

.....
 [1]

- (b) One of the compounds formed in this reaction is potassium oxide.

The electron configurations of a potassium **atom** and an oxygen **atom** are shown below.

K	2.8.8.1
O	2.6

Use this information to explain the bonding in potassium oxide. In your answer you should describe any changes in the electron configurations of these atoms, and deduce the chemical formula of potassium oxide.

.....

 [5]

(c) Another compound formed in the reaction in Fig. 4.1 is potassium peroxide, K_2O_2 . When potassium peroxide is added to water the products are potassium hydroxide and oxygen gas.

For
Examiner's
Use

(i) A student attempted to work out the balanced equation for this reaction. His attempt is shown below.

His teacher said this attempt was incorrect. Explain why this attempt is incorrect, and write down the correct equation.

.....

 [2]

(ii) Describe how the student should test the gas given off to confirm that it is oxygen.

.....
 [1]

(iii) The student found that the pH of the final mixture was 13.

Write the formula and charge of the ion present in the mixture which is responsible for this pH value.

..... [1]

5 A space rocket is launched to the Moon.

(a) After launch, the empty fuel tanks are released and fall back to Earth. As a tank falls, two forces act on it as shown in Fig. 5.1.

For
Examiner's
Use

Fig. 5.1

(i) Name forces F_1 and F_2 .

F_1

F_2

[2]

(ii) As it falls, the tank accelerates because F_1 is greater than F_2 .

What will happen to the size of force F_2 as the tank goes faster?

.....

[1]

(iii) Eventually the two forces will balance each other.

How will this affect the speed of the falling tank?

Explain your answer.

.....

.....

.....

[2]

(b) The rocket travels 400 000 km to the Moon in 80 hours.

Calculate the average speed of the rocket.

State the formula that you use and show your working.

formula used

working

..... [2]

(c) One of the astronauts on the rocket has a mass of 90 kg. The gravitational field strength of the Moon is about one-sixth that of the Earth.

State the differences, if any, between

(i) the mass of the astronaut on the Earth and on the Moon,

..... [1]

(ii) the weight of the astronaut on the Earth and on the Moon.

..... [1]

6 Tuberculosis (TB) is an infectious disease caused by a bacterium. HIV/AIDS is caused by a virus.

(a) Name the cells in the body that help to destroy harmful bacteria and viruses by

(i) producing antibodies,

..... [1]

(ii) phagocytosis

..... [1]

(b) Table 6.1 shows the percentage of people with TB and HIV/AIDS in four parts of the world in 2005.

Table 6.1

part of the world	percentage of people with TB	percentage of people with HIV/AIDS
sub-Saharan Africa	0.51	7.2
Southeast Asia	0.35	1.1
Americas	0.07	0.7
Europe	0.06	0.5

(i) Describe any pattern that seems to link the percentages of people with TB and with HIV/AIDS.

..... [1]
.....

(ii) The virus that causes AIDS infects white blood cells.

Explain how this could be responsible for the pattern that you have described in (i).

..... [2]
.....
.....

(c) In many countries, young people are vaccinated against TB. They are given an injection of weakened TB bacteria.

Explain how this vaccination could make a person immune to TB.

.....

.....

..... [2]

*For
Examiner's
Use*

7 Aluminium, iron, sodium and chlorine are important elements produced by the chemical industry.

For
Examiner's
Use

(a) State which of the elements above

(i) has atoms which are converted into ions by **gaining** an electron,

..... [1]

(ii) has atoms which contain 3 electrons in their outer shells.

..... [1]

(b) When chlorine gas is bubbled into a colourless solution of sodium bromide, the solution turns orange.

Explain this observation.

.....
.....
..... [2]

(c) Fig. 7.1 shows a blast furnace which is used to convert iron(III) oxide into iron.

For
Examiner's
Use

Fig. 7.1

The balanced equations of the three main chemical reactions in the blast furnace are shown in Fig. 7.1. Each reaction is a redox reaction.

(i) State **two** substances, shown in Fig. 7.1, which are reduced.

Explain your answer briefly.

.....

 [3]

(ii) Use the relative atomic masses shown on the Periodic Table to calculate the relative formula mass of iron(III) oxide.

Show your working.

..... [1]

8 A student is having a medical examination.

(a) A dentist checks the student's teeth using a dental mirror. This is shown in Fig. 8.1.

Fig. 8.1

(i) Draw a ray of light from the back of tooth **A** to the dentist's eye to show how the dentist is able to see the back of the tooth.

On the ray, draw arrows showing the direction in which light travels. [3]

(ii) Describe how the dentist could find the density of an irregular object such as an extracted tooth.

.....

.....

.....

.....

.....

.....

..... [4]

- (b) The doctor wants to use a small torch to look down the student's throat. When he switches the torch on, it does not work.

Fig. 8.2 shows the circuit diagram for the torch.

Fig. 8.2

- (i) Explain what is wrong with the torch.

.....
 [1]

- (ii) Draw the correct circuit diagram.

[1]

For
Examiner's
Use

9 Fig. 9.1 shows part of the carbon cycle.

For
Examiner's
Use

Fig. 9.1

(a) Name the process labelled X on Fig. 9.1.

.....

[1]

(b) Explain how carbon dioxide is returned to the air from the bodies of dead organisms.

.....

[2]

(c) Describe how fossil fuels are formed.

.....

.....

..... [2]

(d) Fossil fuels are burned in cars, trucks and other vehicles.

Fig. 9.2 shows the quantity of sulphur dioxide and nitrogen oxides emitted from vehicles in a European country between 1990 and 2003. Over this period, the country brought in measures to try to decrease the emissions of these gases.

The number of vehicles using the roads increased over this time period.

Fig. 9.2

- (i) Suggest a reason for the trend in sulphur dioxide emissions between 1990 and 2003.

.....
..... [1]

- (ii) Catalytic converters were introduced into this country in 1993. They are fitted onto car exhaust systems, and they contain catalysts that cause nitrogen oxide to be reduced to nitrogen.

Suggest two reasons why nitrogen oxides had not been completely eliminated from car exhaust gases by 2003.

- 1.
.....
- 2.
..... [2]

- (iii) Explain how emissions of sulphur dioxide and nitrogen oxides can harm living organisms.

.....
.....
.....
.....
..... [3]
