# CAMBRIDGE INTERNATIONAL EXAMINATIONS GCE Ordinary Level

## MARK SCHEME for the October/November 2013 series

## **5070 CHEMISTRY**

5070/22

Paper 2 (Theory), maximum raw mark 75

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2013 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

|--------|-------------------------------------|----------|-------|
|        | GCE O LEVEL – October/November 2013 | 5070     | 22    |

(b)

| isotope             | <sup>28</sup> Si | <sup>30</sup> Si |     |
|---------------------|------------------|------------------|-----|
| number of protons   | 14               | 14               | (1) |
| number of electrons | 14               | 14               | (1) |
| number of neutrons  | 14               | 16               | (1) |

[3]

(c) 
$$\operatorname{Si} + 2\operatorname{C} l_2 \to \operatorname{SiC} l_4$$
 (1)

(d) (i) does not conduct electricity / does not conduct heat (1)

liquid (at room temperature) / low melting point / low boiling point (1) [2]

(ii) bonding pair between each of the 4 Si and Cl atoms (1)

rest of structure completely correct (1)

IGNORE: inner shell electrons [2]

(e) many (strong) bonds / many (covalent) bonds / lattice / giant structure / lattice of covalent bonds (1)

a lot of energy needed to break the <u>bonds</u> / high temperature needed to break the <u>bonds</u> / strong <u>bonds</u> (1)

[Total: 11]

[2]

#### **A4 a** (i) Any **two** of:

- respiration/fermentation (1)
- decay of organic matter / decomposition of organisms (1)
- combustion of carbon (compounds)/combustion of fossil fuel / combustion of named fossil fuel (1)
- decomposition of carbonates/decomposition of limestone (1)
- from increasing temperature of the oceans / removal of (dissolved) carbon dioxide from oceans (1)
- volcanoes (1) [2]
- (ii) photosynthesis/absorbed by oceans/absorbed by seas (1) [1]
- (b) (i) gas which absorbs infra-red (radiation) / gas which absorbs infra-red (light) (1)

  ALLOW: gas which traps heat / gas which absorbs heat

  [1]

(ii) ammonia is produced / NH<sub>3</sub> produced (1)

(d) mol HC
$$l = 0.01 \times 4/1000$$
 OR  $4 \times 10^{-5}$  (1)

mol Ca(OH)<sub>2</sub> = 
$$2 \times 10^{-5}$$
 / half answer to mol HC $l$  (1)

concentration of Ca(OH)<sub>2</sub> = 
$$(2 \times 10^{-5} \times 1000 / 10)$$
  
=  $2 \times 10^{-3}$  mol / dm<sup>3</sup> (1) [3]

(e) heat solution to crystallisation point / leave in a warm place / partially evaporate solution (1)

filter (off crystals) / pick out crystals

### **AND**

dry crystals with filter paper (1)
