

UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS General Certificate of Education Ordinary Level

	CANDIDATE NAME			
	CENTRE NUMBER		CANDIDATE NUMBER	
* 7 4	COMPUTER ST	TUDIES		7010/13
6 2	Paper 1		Oct	tober/November 2011
5				2 hours 30 minutes
2 5 0	Candidates ans	wer on the Question Paper.		

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in. Write in dark blue or black pen. You may use a soft pencil for any diagrams, graphs or rough working. Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

No marks will be awarded for using brand names of software packages or hardware.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

For Examiner's Use

This document consists of 20 printed pages.

(a)	Give two benefits of networking a set of computers.
	1
	2
	[2]
(b)	A college decides to use network computers with wireless capability.
	Give one advantage and one disadvantage of using wireless systems.
	Advantage:
	Disadvantage:
	[2]

2 The following table shows three applications which require specialist output devices.

For each application, suggest one possible output device and give a reason for your choice.

3

For Examiner's

Application	Output device	Reason for choice of device
A visually impaired person using a word processor		
Using CAD to design a new engine		
Monitoring a house for burglars		

[6]

3 A user wishes to use a word processing application. They can either use a *command line interface* (CLI) or a *graphical user interface* (GUI) to open this application.
 (a) Describe how both methods could be used to select the application including any input hardware needed.

	(i)	CLI
	(ii)	GUI
		[4]
(b)	(i)	What is meant by automatic data capture?
	(ii)	Name a device used in automatic data capture and describe an application that uses it.
		Device:
		Application:
		[3]

4 Five definitions and descriptions are shown below on the left hand side.

Five computer terms are shown on the right.

Match the definitions/descriptions on the left to the correct term on the right by drawing connecting arrows.

check if students' ages are in the range 11 to 18

computer generated operation of a chemical process

software that looks for information based on certain key words

system where all the data are collected first before being processed in one go

typing in a password twice to ensure it is correct

verification

validation

simulation

search engine

batch processing

[5]

5 When new software is produced it is usually accompanied by *user documentation* and *technical documentation*.

For Examiner's Use

(a) Explain these two terms:

user documentation:

(b) The following list contains items that can be found in either or both types of documentation.

Item	User documentation only	Technical documentation only	Both user <u>and</u> technical documentation
how to save a file			
program listing/coding			
hardware and software requirements			
file structures			
list of variables			
how to load the software			
meaning of errors/error messages			

Tick (\checkmark) the box which indicates where you would find each item.

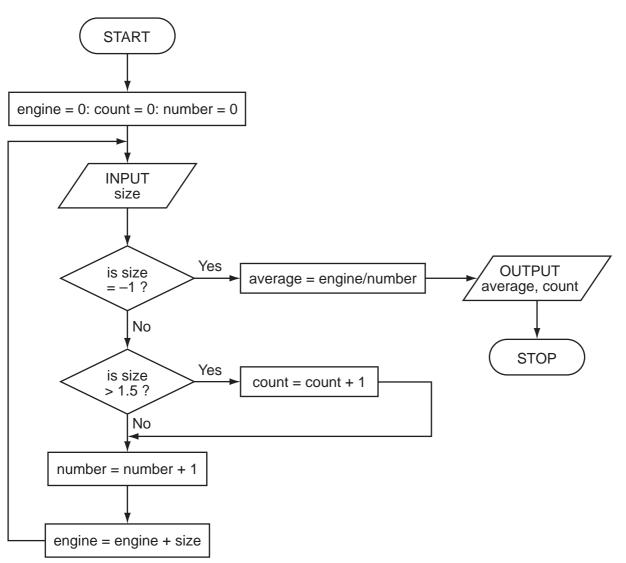

[3]

7 The following flowchart inputs the size of a number of car engines; a value of -1 stops the input.

For Examiner's Use

The following information is output: *average engine size* and *number of engines with size* > 1.5.

Complete the trace table for the following input data:

 $1.8,\ 2.0,\ 1.0,\ 1.3,\ 1.0,\ 2.5,\ 2.0,\ 1.3,\ 1.8,\ 1.3,\ -1$

10 A computer system is being used to monitor and control a chemical process.

- (a) Data are collected from sensors at regular intervals and compared with stored values.
 - (i) Describe how the computer uses this data when **monitoring** the chemical process.

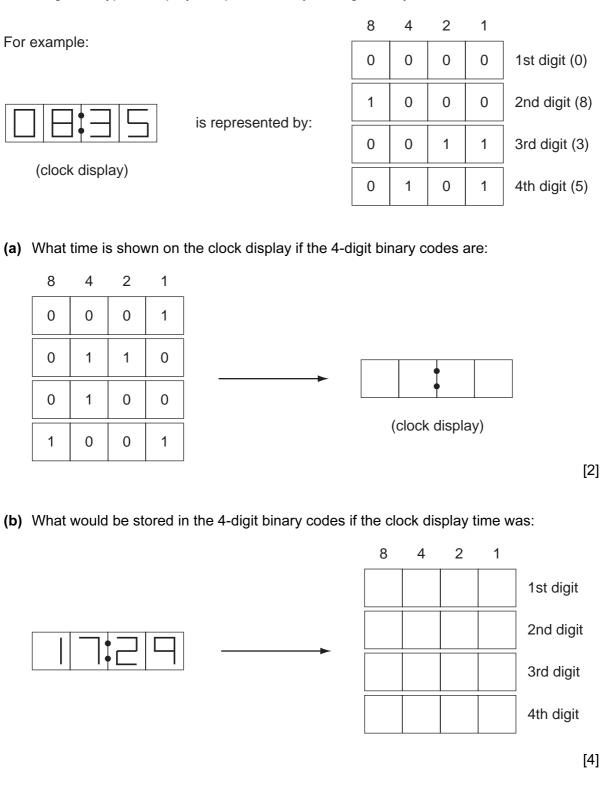

(b)	What steps are necessary for the computer to control the temperature of the chemical process?	For Examiner's Use
	[3]	
(c)	Name two other sensors and give a different application where they are used.	
	sensor 1:	
	application:	
	sensor 2:	
	application:	
	[4]	

11 A digital alarm clock is controlled by a microprocessor. It uses the 24-hour clock system (i.e. 6 pm is 18:00).

14

Each digit in a typical display is represented by a 4-digit binary code:

© UCLES 2011

(c)	The clock alarm has been set at 08:00.	For
	Describe the actions of the microprocessor which enable the alarm to sound at 08:00.	Examiner's Use
	וטז	
	[2]	

12 A database has been set up to show details about countries. Part of the database is shown below.

For Examiner's Use

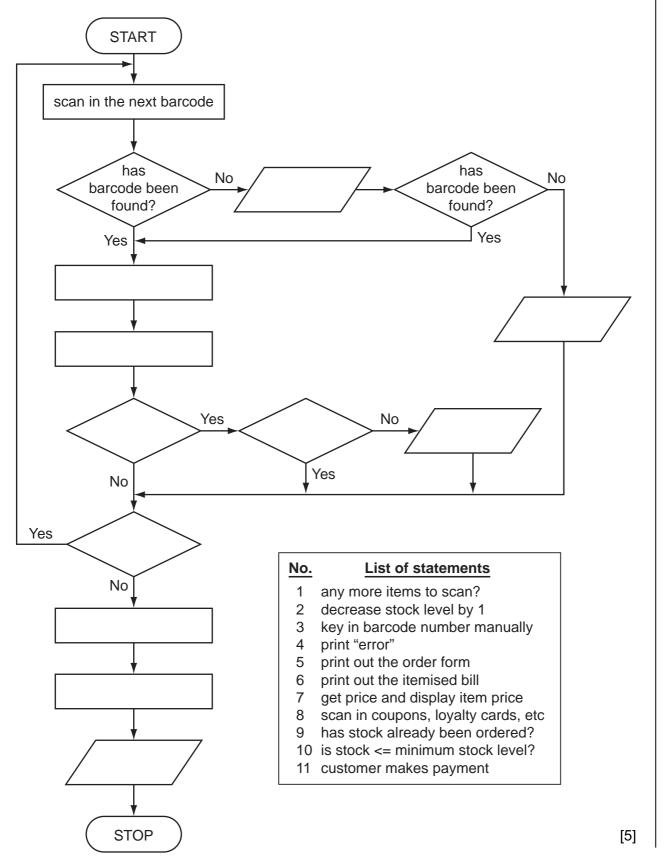

Country code	Country	Continent	Area (millions sq km)	Population (millions)	Coastline	Currency
СН	China	Asia	9.6	1320	Yes	yuan
IN	India	Asia	3.8	1150	Yes	rupee

www.theallpapers.com

13 The following flowchart shows how barcodes are used when a customer buys items from the supermarket. Barcodes are used to find the prices and to carry out stock control. Several stages are missing from the flowchart. These stages are shown in the item list below.

Insert the correct statements, using numbers only, to complete the flowchart.

For

Examiner's Use **14** An alarm, Y, sends a signal (Y = 1) when certain fault conditions in a chemical process are detected. The inputs are:

For Examiner's Use

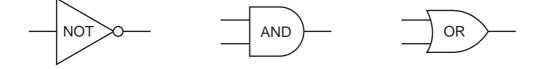

Input	Binary value	Condition
Λ	1	acidity > 5
~	0	acidity <= 5
т	1	temperature >= 120°C
	0	temperature < 120°C
e	1	stirrer bar ON
3	0	stirrer bar OFF

The alarm, Y, returns a value of 1 if:

either (i) temperature >= 120°C AND stirrer bar is OFF

or (ii) acidity > 5 AND temperature < 120°C

(a) Draw the logic circuit for the above system using these logic gates.

[5]

Α	т	S	Y
0	0	0	
0	0	1	
0	1	0	
0	1	1	
1	0	0	
1	0	1	
1	1	0	
1	1	1	

(b) Complete the truth table for this alarm system.

[4]

For Examiner's Use

15 A student gave the following **three** computer definitions.

Give the name of the term being described in each case.

(i) "a signal from a device sent to a computer causing the CPU to stop its current operation temporarily"

(ii) "an exchange of signals between two devices when communicating to ensure synchronisation"

(iii) "a temporary memory to store data waiting to be sent to a device"

[3]

19

16	The weather conditions in a town are being monitored over a year (365 days). The values recorded <i>per day</i> are weather type and temperature (e.g. CLOUDY, 25).	For Examiner's Use					
	Write an algorithm, using pseudocode or flowchart only, which:						
	 inputs the weather type and temperature for each day outputs the number of days that were CLOUDY, RAINING, SUNNY or FOGGY outputs the highest recorded temperature for the year outputs the lowest recorded temperature for the year
