#### UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

General Certificate of Education O Level

### MARK SCHEME for the June 2005 question paper

### **5054 PHYSICS**

5054/04

Paper 4 (Alternative to Practical), maximum mark 30

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which Examiners were initially instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began. Any substantial changes to the mark scheme that arose from these discussions will be recorded in the published *Report on the Examination*.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the *Report on the Examination*.

• CIE will not enter into discussion or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the June 2005 question papers for most IGCSE and GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

June 2005

GCE O Level

# MARK SCHEME

# MAXIMUM MARK: 30

## SYLLABUS/COMPONENT: 5054/04

PHYSICS (Alternative to Practical)

Pag	e 1		Mark Scheme Sylla	bus	Paper
			GCE O LEVEL – JUNE 2005 505	54	4
(a)	valu	n table)	[2]		
(b)	scales; more than $\frac{1}{2}$ page, sensible, include (0,0) 6 points plotted $\pm 1$ square (ignore 0,0)				
(C)	triangle drawn/values more than ½ line length/½ points from table values accurately computed (allow any relevant values) minimum 2 sf and correct unit				[3]
(d)	corr	correct glass type identified for their value			[1]
(e)	(i)	water wou	uld increase mass (cause problem)/time taken to dry n	narbles	[1]
				ver marbles	/ [1]
(f)					
	diameter of the marble conversion r to d and substitution/equation changed to d not r (can back-credit diameter here if blank or radius is given above)				[3]
					Total: 15
(a)	circu	uit drawn,	A in series with lamp and rheostat V in parallel with lamp		[2]
(b)	table with three columns, heading current, voltage, resistance ignore repeats three correct units				[2]
(c)	No:	filament	still has resistance (when no current flows)		[1]
					Total: 5
(a)	to give a sufficient temperature rise/heat up the lead			[1]	
(b)	to avoid breaking the thermometer				[1]
(c)	adva	antage	fewer inversions needed (for same height)/larger $\Delta \theta$ same number of inversions more accurate/thermal energy/potential energy	for the	
	disa	dvantage	difficult to invert quickly/lead shot more likely to slide taken/tube or bung may be damaged/more heat loss	-	e [2]
(d)		-	· · ·	-	
(d)	(i) (ii)	345 (no ui height fall	taken/tube or bung may be damaged/more heat los	5	[2] [1]
	<ul> <li>(a)</li> <li>(b)</li> <li>(c)</li> <li>(d)</li> <li>(e)</li> <li>(f)</li> <li>(a)</li> <li>(b)</li> <li>(c)</li> <li>(a)</li> <li>(b)</li> <li>(b)</li> </ul>	<ul> <li>(b) axes scale 6 por best</li> <li>(c) trian valu mini</li> <li>(d) correct</li> <li>(e) (i) (ii)</li> <li>(f) micr dian converts</li> <li>(a) circut</li> <li>(b) table igno</li> <li>(c) No:</li> <li>(a) to gi</li> <li>(b) to averts</li> </ul>	<ul> <li>(a) values calcula</li> <li>(b) axes, correct values scales; more to 6 points plotter best fit straigh</li> <li>(c) triangle drawn values accuration minimum 2 sf</li> <li>(d) correct glass to 6</li> <li>(e) (i) water wout (ii) large enorganitable values accuration for the conversion r to 7 (can back-creation back-creation back-creation (can back-creation) to 6 table with three ignore repeats</li> <li>(c) No: filament</li> <li>(a) to give a sufficient</li> </ul>	GCE O LEVEL – JUNE 2005       505         (a) values calculated correctly mass (to 1 dp); volume (max 1 if units i       (max 1 if units i         (b) axes, correct way round, labelled quantity and unit scales; more than ½ page, sensible, include (0,0)       6 points plotted ±1 square (ignore 0,0)         best fit straight line drawn, neatly (through minimum 6 points)       (c) triangle drawn/values more than ½ line length/½ points from table values accurately computed (allow any relevant values) minimum 2 sf and correct unit         (d) correct glass type identified for their value       (e)       (i) water would increase mass (cause problem)/time taken to dry n         (ii) large enough to contain marbles/will not overflow/enough to cov suitable values quoted e.g. 40 cm³ water or 53.5 cm³       (f) micrometer/vernier calliper/ruler only if >one marble in a line diameter of the marble conversion r to d and substitution/equation changed to d not r (can back-credit diameter here if blank or radius is given above)         (a) circuit drawn, A in series with lamp and rheostat V in parallel with lamp       (b) table with three columns, heading current, voltage, resistance ignore repeats three correct units         (c) No: filament still has resistance (when no current flows)       (a) to give a sufficient temperature rise/heat up the lead         (b) to avoid breaking the thermometer       (c) advantage fewer inversions needed (for same height)/larger Δθ same number of inversions	GCE O LEVEL – JUNE 2005     5054       (a) values calculated correctly mass (to 1 dp); volume (max 1 if units in table)     (b) axes, correct way round, labelled quantity and unit scales; more than ½ page, sensible, include (0,0) 6 points plotted ± 1 square (ignore 0,0) best fit straight line drawn, neatly (through minimum 6 points)       (c) triangle drawn/values more than ½ line length/½ points from table values accurately computed (allow any relevant values) minimum 2 sf and correct unit       (d) correct glass type identified for their value       (e) (i) water would increase mass (cause problem)/time taken to dry marbles uitable values quoted e.g. 40 cm <sup>3</sup> water or 53.5 cm <sup>3</sup> (f) micrometer/vernier calliper/ruler only if >one marble in a line diameter of the marble conversion r to d and substitution/equation changed to d not r (can back-credit diameter here if blank or radius is given above)       (a) circuit drawn, A in series with lamp and rheostat V in parallel with lamp       (b) table with three columns, heading current, voltage, resistance ignore repeats three correct units       (c) No: filament still has resistance (when no current flows)       (a) to give a sufficient temperature rise/heat up the lead       (b) to avoid breaking the thermometer       (c) advantage     fewer inversions needed (for same height)/larger Δθ for the same number of inversions
