## Performance Pillar

## P2 - Performance Management

## 19 November 2014 - Wednesday Afternoon Session

## Instructions to candidates

| You are allowed three hours to answer this question paper. |
| :--- |
| You are allowed 20 minutes reading time before the examination begins <br> during which you should read the question paper and, if you wish, make <br> annotations on the question paper. However, you will not be allowed, under <br> any circumstances, to open the answer book and start writing or use your <br> calculator during this reading time. |
| You are strongly advised to carefully read ALL the question requirements <br> before attempting the question concerned (that is all parts and/or sub- <br> questions). |
| ALL answers must be written in the answer book. Answers written on the <br> question paper will not be submitted for marking. |
| You should show all workings as marks are available for the method you use. |
| ALL QUESTIONS ARE cOMPULSORY. |
| Section A comprises 5 questions and is on pages 2 to 7. |
| Section B comprises 2 questions and is on pages 8 to 11. |
| Maths tables and formulae are provided on pages 13 to 16. |
| The list of verbs as published in the syllabus is given for reference on page <br> 19. |
| Write your candidate number, the paper number and examination subject title <br> in the spaces provided on the front of the answer book. Also write your <br> contact ID and name in the space provided in the right hand margin and seal <br> to close. |
| Tick the appropriate boxes on the front of the answer book to indicate which <br> questions you have answered. |

SECTION A - 50 MARKS
[You are advised to spend no longer than 18 minutes on each question in this section.]

## ANSWER ALL FIVE QUESTIONS IN THIS SECTION. EACH QUESTION IS WORTH 10 MARKS. YOU SHOULD SHOW YOUR WORKINGS AS MARKS ARE AVAILABLE FOR THE METHOD YOU USE.

## Question One

PK is a large public company in the telecommunications sector. One of its main planning and control tools is the preparation and use of traditional annual budgets. Whilst this may be appropriate for the Sales and Manufacturing divisions, it draws criticisms from the directors of divisions such as Training and Education, Advertising and Publicity, and Research and Development who are responsible for large amounts of discretionary expenditure. These directors have submitted a joint report to the Finance Director which suggests that ZeroBased Budgeting (ZBB) should be used for their respective divisions.

The Finance Director has agreed to use the Research and Development division as a pilot for ZBB for the next financial year.

## Required:

Explain Zero-Based Budgeting and the main stages that would need to be undertaken to introduce it into the Research and Development Division.
(Total for Question One = 10 marks)

## Question Two

CD manufactures and sells a number of products. All of its products have a life cycle of less than one year. CD uses a four stage life cycle model (Introduction, Growth, Maturity and Decline).

CD has recently developed an innovative product. It was decided that it would be appropriate to adopt a market skimming pricing policy for the launch of the product.

However CD expects that other companies will try to join the market very soon.
This product is currently in the Introduction stage of its life cycle and is generating significant unit profits. However, there are concerns that these current unit profits will not continue during the other stages of the product's life cycle.

## Required:

Explain, with reasons, the changes, if any, to the unit selling price AND the unit production cost that could occur when the product moves from the previous stage into each of the following stages of its life cycle:
(i) Growth
(ii) Maturity
(Total for Question Two = 10 marks)

Section A continues on the next page

TURN OVER

## Question Three

A company is developing a new product. During its expected life, 16,000 units of the product will be sold for $\$ 82$ per unit.

Production will be in batches of 1,000 units throughout the life of the product. The direct labour cost is expected to reduce due to the effects of learning for the first eight batches produced. Thereafter, the direct labour cost will remain constant at the same cost per batch as the $8^{\text {th }}$ batch.

The direct labour cost of the first batch of 1,000 units is expected to be $\$ 35,000$ and a $90 \%$ learning effect is expected to occur.

The direct material and other non-labour related variable costs will be $\$ 40$ per unit throughout the life of the product.

There are no fixed costs that are specific to the product.

Required:
(a)
(i) Calculate the expected direct labour cost of the $8^{\text {th }}$ batch.
(ii) Calculate the expected contribution to be earned from the product over its lifetime.

Note: The learning index for a $90 \%$ learning curve $=-0.152$

It is now thought that a learning effect will continue for all of the 16 batches that will be produced.
(b) Calculate the rate of learning required to achieve a lifetime product contribution of $\$ 400,000$, assuming that a constant rate of learning applies throughout the product's life.

## Question Four

YY is a large banking organisation. It has a branch in most of the towns in the country in which it operates. The bank's business is mainly concerned with private individuals. It is a very 'traditional' bank that offers only 'over the counter' services during limited opening hours.

At a recent board meeting, the directors of the bank stated that they were worried that the bank was losing customers to the new style banks that offer a much more friendly service, longer opening hours, internet banking and a diverse range of banking services.

It has now been decided that the bank will pursue strategies to achieve the goal of being "The bank that people choose" and will use a balanced scorecard to monitor progress towards that goal.

## Required:

Produce, for each of the three non-financial perspectives of a balanced scorecard, an objective and a performance measure that the bank could use. (In your answer you must state each perspective, and the objective and performance measure for that perspective and explain why they support the goal of YY becoming "The bank that people choose".)
(Total for Question Four = 10 marks)

## Section A continues on the next page

## Question Five

A company sells three products: $\mathrm{D}, \mathrm{E}$ and F . The market for the products dictates that the numbers of products sold are always in the ratio of $3 \mathrm{D}: 4 \mathrm{E}: 5 \mathrm{~F}$.

Budgeted sales volumes and prices, and cost details for the previous period were as follows:

|  | D | E | F |
| :--- | :---: | :---: | :---: |
| Sales units | 300 | 400 | 500 |
| Selling price per unit | $\$ 80$ | $\$ 55$ | $\$ 70$ |
| Contribution to sales ratio | $70 \%$ | $65 \%$ | $50 \%$ |

The budgeted total fixed costs for that period were $\$ 31,200$.

Required:
(a) Calculate for that period:
(i) the break-even sales revenue.
(ii) the volume of each product that would have needed to be sold if the company had wanted to earn a profit of $\$ 29,520$ in that period.
(6 marks)

The budget for the previous period was based on the company having a $20 \%$ share of the total market of 6,000 units.

It has now been realised that the size of the market had been under-estimated. The actual total market size for that period was 7,500 units.

During that period the company actually sold 1,740 units for a total of $\$ 109,500$. Unit variable costs were as expected but total fixed costs were $10 \%$ higher than budgeted.

The company reports variances using a standard marginal costing system.

## Question Five continues on the next page

## Required:

(b) Calculate for the company for the previous period:
(i) The market size variance.
(ii) The market share variance.

## End of Section A

Section B starts on page 8

## SECTION B - 50 MARKS

[You are advised to spend no longer than 45 minutes on each question in this section.]

## ANSWER BOTH QUESTIONS IN THIS SECTION. EACH QUESTION IS WORTH 25 MARKS. YOU SHOULD SHOW YOUR WORKINGS AS MARKS ARE AVAILABLE FOR THE METHOD YOU USE.

## Question Six

AC manufactures three products, $\mathrm{X}, \mathrm{Y}$ and Z using the same production line. Details of the three products are shown below:

|  | $\mathbf{X}$ | $\mathbf{Y}$ | $\mathbf{Z}$ |
| :--- | :---: | :---: | :---: |
| Selling price per unit \$ | 28.00 | 36.00 | 42.00 |
| Variable cost per unit \$ | 12.00 | 10.00 | 21.50 |
|  |  |  |  |
| Processing time per unit | 2 hours | 4 hours | 2 hours |

The production line has a capacity of 30,000 processing hours per month and is not used to make any other products. The monthly demand for the products at the current selling prices is as follows:
$X$ : 8,000 units
Y: 6,000 units
Z: 6,000 units
No inventories are held.

## Required:

(a) Calculate the optimum production plan and the resulting contribution per month based on the above information.

AC's Managing Director has now completed a review of the market and has decided to discontinue Product $Y$. It has been established that a new competitor has entered the market with a product that is technically superior to Product Y. Also, the competitor seems to be adopting a market penetration pricing policy and AC will not be able to match the low selling price.

The review established that for Product $X$ the monthly demand would be 8,000 units at a selling price of $\$ 28$ per unit, and that for Product $Z$ the monthly demand would be 6,000 units at a selling price of $\$ 42$ per unit. For both products, a reduction in the selling price of $\$ 1$ per unit would increase demand by 1,000 units and an increase in the selling price of $\$ 1$ per unit would reduce demand by 1,000 units. This relationship will exist for all levels of monthly demand.

The current machinery necessitates that production runs must be for 1,000 units.

## Required:

(b) Calculate the optimum monthly production plan and the resulting contribution. (Note: the maximum processing time is 30,000 hours per month).
(8 marks)

A machine can be hired that would enable processing time to be increased to 60,000 hours per month. The machine does not have to be set up for production runs of 1,000 units.

## Required:

(c) Calculate the maximum amount per month that should be paid to hire the machine.

Note: If $P=a-b x$ then $M R=a-2 b x$

The Production Director has suggested that the Managing Director was too hasty when making the decision to discontinue Product Y and should have subjected Product Y to a "value analysis" exercise.

Required:
(d) Discuss the view that subjecting Product $Y$ to a value analysis exercise could have led to that product not being discontinued.
(5 marks)
(Total for Question Six = 25 marks)

## Section B continues on the next page

## Question Seven

$A A$ and $B B$ are two divisions of the $Z Z$ group. The $A A$ division manufactures electrical components which it sells to other divisions and external customers.

The BB division has designed a new product, Product $B$, and has asked $A A$ to supply the electrical component, Component $A$, that is needed in the new product. This will be a completely new style of component. Each unit of Product $B$ will require one Component $A$. This component will not be sold by AA to external customers. AA has quoted a transfer price to BB of $\$ 45$ for each unit of Component $A$.

It is the policy of the ZZ group to reward managers based on their individual division's return on capital employed.

Details of the monthly production for each division are as follows:

## AA division

| Output | Component A will be produced in batches of 1,000 units. The maximum <br> capacity is 6,000 components per month. |
| :--- | :--- |
| Variable cost | $\$ 15$ per component |
| Fixed costs | $\$ 50,000$ (these are incurred specifically to produce Component $A$ ) |

## BB division

| Output | Product B will be produced in batches of 1,000 units. The maximum <br> customer demand is 6,000 units of Product B per month. |
| :--- | :--- |
| Variable cost | $\$ 9$ per unit plus the cost of Component A |
| Fixed costs | $\$ 75,000$ (these are incurred specifically to produce Product B) |

The relationship between monthly customer demand and the selling price of Product $B$ is shown below:

| Demand | Selling price per unit |
| :---: | :---: |
| 1,000 units | $\$ 120$ |
| 2,000 units | $\$ 110$ |
| 3,000 units | $\$ 100$ |
| 4,000 units | $\$ 90$ |
| 5,000 units | $\$ 80$ |
| 6,000 units | $\$ 67$ |

## Required:

(a) Calculate, based on a transfer price of $\$ 45$ per Component A , the monthly profit that would be earned as a result of selling Product B by:
(i) BB division
(ii) AA division
(iii) ZZ group
(b) Calculate the maximum monthly profit from the sale of Product B for the ZZ group.
(4 marks)
(c) Calculate, using the marginal cost of Component A as the transfer price, the monthly profit that would be earned as a result of selling Product $B$ by:
(i) BB division
(ii) AA division
(iii) ZZ group
(5 marks)
(d) Discuss, using the above scenario, the problems of setting a transfer price and suggest a transfer pricing policy that would help the $Z Z$ group to overcome the transfer pricing problems that it faces.

## End of question paper

Maths tables and formulae are on pages 13 to 16

## This page is blank

## PRESENT VALUE TABLE

Present value of 1 unit of currency, that is $(1+r)^{-n}$ where $r=$ interest rate; $n=$ number of periods until payment or receipt.

| Periods | Interest rates $(r)$ |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $(n)$ | $1 \%$ | $2 \%$ | $3 \%$ | $4 \%$ | $5 \%$ | $6 \%$ | $7 \%$ | $8 \%$ | $9 \%$ |  |
| 1 | 0.990 | 0.980 | 0.971 | 0.962 | 0.952 | 0.943 | 0.935 | 0.926 | 0.917 | 0.909 |  |
| 2 | 0.980 | 0.961 | 0.943 | 0.925 | 0.907 | 0.890 | 0.873 | 0.857 | 0.842 | 0.826 |  |
| 3 | 0.971 | 0.942 | 0.915 | 0.889 | 0.864 | 0.840 | 0.816 | 0.794 | 0.772 | 0.751 |  |
| 4 | 0.961 | 0.924 | 0.888 | 0.855 | 0.823 | 0.792 | 0.763 | 0.735 | 0.708 | 0.683 |  |
| 5 | 0.951 | 0.906 | 0.863 | 0.822 | 0.784 | 0.747 | 0.713 | 0.681 | 0.650 | 0.621 |  |

## FORMULAE

## PROBABILITY

$A \cup B=\boldsymbol{A}$ or $\boldsymbol{B} . \quad A \cap B=\boldsymbol{A}$ and $\boldsymbol{B}$ (overlap).
$P(B \mid A)=$ probability of $B$, given $A$.

## Rules of Addition

If $A$ and $B$ are mutually exclusive
If $A$ and $B$ are not mutually exclusive:
$P(A \cup B)=P(A)+P(B)$
$P(A \cup B)=P(A)+P(B)-P(A \cap B)$

Rules of Multiplication
If $A$ and $B$ are independent:
If $A$ and $B$ are not independent
$P(A \cap B)=P(A) * P(B)$
$P(A \cap B)=P(A) * P(B \mid A)$
$E(X)=\sum$ (probability * payoff)

## DESCRIPTIVE STATISTICS

Arithmetic Mean

$$
\bar{x}=\frac{\sum x}{n} \quad \bar{x}=\frac{\sum f x}{\sum f} \quad \text { (frequency distribution) }
$$

Standard Deviation

$$
S D=\sqrt{\frac{\sum(x-\bar{x})^{2}}{n}} \quad S D=\sqrt{\frac{\sum \mathrm{fx}^{2}}{\sum \mathrm{f}}-\overline{\mathrm{x}^{2}}} \text { (frequency distribution) }
$$

## INDEX NUMBERS

Price relative $=100 * P_{1} / P_{0} \quad$ Quantity relative $=100 * Q_{1} / Q_{0}$

Price: $\quad \frac{\sum \mathrm{w} *\left(\frac{\mathrm{P}_{1}}{\mathrm{P}_{\mathrm{o}}}\right)}{\sum \mathrm{w}} \times 100$

Quantity:

$$
\frac{\sum w *\left(\frac{Q_{1}}{Q_{o}}\right)}{\sum w} \times 100
$$

## TIME SERIES

Additive Model
Series = Trend + Seasonal + Random

Multiplicative Model
Series = Trend * Seasonal * Random

## FINANCIAL MATHEMATICS

## Compound Interest (Values and Sums)

Future Value $S$, of a sum of $X$, invested for $n$ periods, compounded at $r \%$ interest

$$
S=X[1+r]^{n}
$$

## Annuity

Present value of an annuity of $£ 1$ per annum receivable or payable for $n$ years, commencing in one year, discounted at $r \%$ per annum:

$$
\mathrm{PV}=\frac{1}{r}\left[1-\frac{1}{[1+r]^{n}}\right]
$$

## Perpetuity

Present value of $£ 1$ per annum, payable or receivable in perpetuity, commencing in one year, discounted at $r \%$ per annum:

$$
\mathrm{PV}=\frac{1}{r}
$$

## LEARNING CURVE

$$
Y_{x}=a X^{b}
$$

where:
$Y_{X}=$ the cumulative average time per unit to produce $X$ units;
$a=$ the time required to produce the first unit of output;
$X=$ the cumulative number of units;
$b=$ the index of learning.
The exponent $b$ is defined as the log of the learning curve improvement rate divided by $\log 2$.

## INVENTORY MANAGEMENT

Economic Order Quantity

$$
\mathrm{EOQ}=\sqrt{\frac{2 \mathrm{C}_{0} \mathrm{D}}{\mathrm{C}_{\mathrm{h}}}}
$$

where: $C_{0}=$ cost of placing an order
$\mathrm{C}_{\mathrm{h}}=$ cost of holding one unit in inventory for one year
D = annual demand

## LIST OF VERBS USED IN THE QUESTION REQUIREMENTS

A list of the learning objectives and verbs that appear in the syllabus and in the question requirements for each question in this paper.
It is important that you answer the question according to the definition of the verb.

| LEARNING OBJECTIVE | VERBS USED | DEFINITION |
| :---: | :---: | :---: |
| Level 1 - KNOWLEDGE |  |  |
| What you are expected to know. | List | Make a list of |
|  | State | Express, fully or clearly, the details/facts of |
|  | Define | Give the exact meaning of |
| Level 2 - COMPREHENSION |  |  |
| What you are expected to understand. | Describe | Communicate the key features |
|  | Distinguish | Highlight the differences between |
|  | Explain | Make clear or intelligible/State the meaning or purpose of |
|  | Identify | Recognise, establish or select after consideration |
|  | Illustrate | Use an example to describe or explain something |
| Level 3 - APPLICATION |  |  |
| How you are expected to apply your knowledge. | Apply | Put to practical use |
|  | Calculate | Ascertain or reckon mathematically |
|  | Demonstrate | Prove with certainty or to exhibit by practical means |
|  | Prepare | Make or get ready for use |
|  | Reconcile | Make or prove consistent/compatible |
|  | Solve | Find an answer to |
|  | Tabulate | Arrange in a table |
| Level 4 - ANALYSIS |  |  |
| How are you expected to analyse the detail of what you have learned. | Analyse | Examine in detail the structure of |
|  | Categorise | Place into a defined class or division |
|  | Compare and contrast | Show the similarities and/or differences between |
|  | Construct | Build up or compile |
|  | Discuss | Examine in detail by argument |
|  | Interpret | Translate into intelligible or familiar terms |
|  | Prioritise | Place in order of priority or sequence for action |
|  | Produce | Create or bring into existence |
| Level 5 - EVALUATION |  |  |
| How are you expected to use your learning to evaluate, make decisions or recommendations. | Advise | Counsel, inform or notify |
|  | Evaluate | Appraise or assess the value of |
|  | Recommend | Advise on a course of action |
