## 22 May 2013 - Wednesday Afternoon Session

## Instructions to candidates

| You are allowed three hours to answer this question paper. |
| :--- |
| You are allowed 20 minutes reading time before the examination begins <br> during which you should read the question paper and, if you wish, make <br> annotations on the question paper. However, you will not be allowed, under <br> any circumstances, <br> calculator during this reading time answer book and start writing or use your |
| You are strongly advised to carefully read ALL the question requirements <br> before attempting the question concerned (that is all parts and/or sub- <br> questions). |
| ALL answers must be written in the answer book. Answers written on the <br> question paper will not be submitted for marking. |
| You should show all workings as marks are available for the method you use. |
| ALL QUESTIONS ARE ComPULSORY. |
| Section A comprises 5 questions and is on pages 2 to 5. |
| Section B comprises 2 questions and is on pages 6 to 9. |
| Maths tables and formulae are provided on pages 11 to 14. |
| The list of verbs as published in the syllabus is given for reference on page <br> 15. |
| Write your candidate number, the paper number and examination subject title <br> in the spaces provided on the front of the answer book. Also write your <br> contact ID and name in the space provided in the right hand margin and seal <br> to close. |

Tick the appropriate boxes on the front of the answer book to indicate which questions you have answered.

SECTION A - 50 MARKS
[You are advised to spend no longer than 18 minutes on each question in this section.]

ANSWER ALL FIVE QUESTIONS IN THIS SECTION. EACH QUESTION IS WORTH 10 MARKS. YOU SHOULD SHOW YOUR WORKINGS AS MARKS ARE AVAILABLE FOR THE METHOD YOU USE.

## Question One

A tree farm supplies shrubs to two customers. Each shrub has a selling price of $\$ 60$. It costs $\$ 25$ to grow a shrub and get it to the point of sale. Additional costs incurred by the farm are $\$ 100$ per order fulfilled and delivery costs of $\$ 500$ per order delivered.

Details of two of the farm's customers (B and C) for the previous period are as follows:

|  | Customer B | Customer C |
| :--- | :--- | :--- |
| Shrubs purchased | 960 | 650 |
| Discount allowed | $15 \%$ | $20 \%$ |
| Orders fulfilled | 8 (each for 120 shrubs) | 10 (each for less than 100 shrubs) |
| Deliveries made | 8 | 0 |

Customers are given a 15\% discount on orders for 100 shrubs or more.
Customer C is given a 20\% discount for collecting the shrubs using its own transport.

## Required:

Evaluate the two customers. (Your answer should include customer profitability statements and appropriate measures.)
(Total for Question One = 10 marks)

## Question Two

A new product has a budgeted total profit of $\$ 75,000$ from the first 64 units. The time taken to produce the first unit was 225 hours. The labour rate is $\$ 40$ per hour. A $90 \%$ learning curve is expected to apply indefinitely.

Note: The learning index for a $90 \%$ learning curve is -0.152

## Required:

Calculate the sensitivity of the budgeted total profit from the first 64 units to independent changes in:
(i) The labour rate
(ii) The learning rate.
(Total for Question Two = 10 marks)

## Question Three

PP is a telecoms provider. It has been operating for five years and has experienced good results; profits have increased by an average of $15 \%$ each year. It is accepted within the company that this success has been the result of the continuous stream of new and varied 'cutting edge' products that PP offers. The Research and Development Division has enjoyed the freedom of working with the directive of "Be creative".

The Director of the Research and Development Division of PP is not happy. At a recent board meeting she said:
"The Research and Development Division is finding it extremely difficult to maintain its current levels of achievement. The Division is suffering from a lack of funds as a result of PP's budgeting system. We receive an uplift of 5\% each year from the previous year's budget. This does not provide the necessary funds or freedom to be able to keep the company ahead of the competition. I would like to see incremental budgeting replaced by zero based budgeting in my division".

Section A continues on the next page

TURN OVER

## Question Four

The owner, $Z$, of a business has been attending a course on scenario planning and decision making. As a result of that advice the owner has produced, by using cost volume and profit analysis, 12 scenarios for a new product that the business will launch in the near future. There are four possible marketing packages that could be used ( $A, B, C$ or $D$ ) and there are three possible market conditions (poor, average or good) that could be encountered. The Net Present Value of the cash flows resulting from each of the scenarios is shown in the table below.

|  | Marketing package |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Market <br> conditions | A <br> $\$ 000$ | B <br> Poor | 180 | 230 |
| Average | 190 | 200 | 220 | 190 |
| Good | 550 | 260 | 210 | 275 |

Unfortunately Z missed the session on how to deal with risk and uncertainty. He has sent the above table to the tutor for the course and has asked for help. The tutor replied "I will send you some notes. Based on your table you will need the methods in the section on 'Uncertainty'. If you can estimate the probability of each type of market condition occurring you need 'Risk based methods'. However, whichever method you use, your decision will be influenced by your attitude."

## Required:

## Note: calculations are NOT required.

Explain FOUR methods that could help $Z$ to decide which marketing package to choose. Your answer should include THREE methods to deal with uncertainty, ONE method to deal with risk, and an explanation of the "attitude" that would be associated with the decision maker using each of the four methods.
(Total for Question Four = 10 marks)

Section A continues on the next page

## Question Five

The modern dynamic business environment has been described as a "buyer's market" in which companies must react to the rapidly changing characteristics of the market and the needs of customers. Many managers have criticised traditional forms of budgeting for being too restrictive and for being of little use for performance management and control.

## Required:

Explain how the principles of "Beyond Budgeting" promote a cultural framework that is suitable for the modern dynamic business environment.
(Total for Question Five = 10 marks)

## End of Section A <br> Section B starts on page 6

SECTION B - 50 MARKS
[You are advised to spend no longer than 45 minutes on each question in this section.]

## ANSWER BOTH QUESTIONS IN THIS SECTION. EACH QUESTION IS WORTH 25 MARKS. YOU SHOULD SHOW YOUR WORKINGS AS MARKS ARE AVAILABLE FOR THE METHOD YOU USE.

## Question Six

A company manufactures three products $\mathrm{D}, \mathrm{E}$ and F which use the same resources (but in different amounts). In addition to these resources each unit of Product $F$ uses a component which the company currently purchases from an external supplier for $\$ 80$. The demand for the products in Month 1 and the details per unit of the three products are as shown below:

|  | D | E | F |
| :--- | ---: | ---: | ---: |
| Demand (units) | 2,400 | 2,200 | 3,000 |
|  | $\$$ | $\$$ | $\$$ |
| Selling price | 112 | 136 | 153 |
| Component |  |  | 80 |
| Direct materials (\$4 per kg) | 12 | 16 | 12 |
| Skilled labour (\$16 per hour) | 16 | 24 | 8 |
| Unskilled labour (\$12 per hour) | 18 | 12 | 9 |
| Variable overhead (\$3 per machine hour) | 12 | 12 | 9 |

The fixed costs of the company are $\$ 150,000$ per month.
The company has reverse engineered the component and has realised that it could make the component in-house. The cost of making a component is shown below:

|  | $\$$ |
| :--- | ---: |
| Direct materials (\$4 per kg) | 12 |
| Skilled labour (\$16 per hour) | 16 |
| Unskilled labour (\$12 per hour) | 3 |
| Variable overhead (\$3 per machine hour) | 6 |

There would be no incremental fixed costs incurred as a result of making the component inhouse.

In Month 1 the maximum availability of skilled labour is 5,400 hours but all other resources are readily available.

The company bases all short term decisions on profit maximisation.

## Required:

(a) Calculate the optimum production plan for Month 1 and the resulting profit. (Note: The company would either buy the component or make it inhouse; it would not do a mixture of the two options.)
(11 marks)

For legal reasons it will not be possible to produce Product F in Month 2.
Demand for products D and E will be 3,000 units each in Month 2. No inventories can be held.

The availability of resources in Month 2 is as follows:

| Direct materials | 16,000 | kg |
| :--- | ---: | :--- |
| Skilled labour | 5,400 | hours |
| Unskilled labour | 5,000 | hours |
| Machine hours | 19,600 | hours |

## Required:

(b)
(i) Identify the objective function and the constraints to be used in a linear programming model to determine the optimum production plan for Month 2.
(4 marks)
(ii) The solution to the linear programming model shows that the only binding constraints in Month 2 are those for skilled labour and unskilled labour.

Produce, using simultaneous equations, the optimum production plan and resulting profit for Month 2. (You are NOT required to draw or sketch a graph.)
(4 marks)
(c) It has now been decided that Product F will be redesigned. A team will be formed with representatives from various departments in the company to undertake a Value Analysis exercise on Product F.

## Required:

Describe the stages involved in a Value Analysis exercise.

## Question Seven

S Division and R Division are two divisions in the SR group of companies. S Division manufactures one type of component which it sells to external customers and also to R Division.

Details of S Division are as follows:
Market price per component \$200
Variable cost per component \$105
Fixed costs \$1,375,000 per period
Demand from R Division 20,000 components per period
Capacity
35,000 components per period

R Division assembles one type of product which it sells to external customers. Each unit of that product requires two of the components that are manufactured by S Division.

Details of R Division are as follows:
Selling price per unit \$800
Variable cost per unit:
Two components from S 2 @ transfer price
Other variable costs \$250

Fixed costs
Demand
Capacity 10,000 units per period

## Group Transfer Pricing Policy

Transfers must be at opportunity cost.
R must buy the components from S .
S must satisfy demand from R before making external sales.

## Required:

(a) Calculate the profit for each division if the external demand per period for the components that are made by $S$ Division is:
(i) 15,000 components
(ii) 19,000 components
(iii) 35,000 components
(b) Calculate the financial impact on the Group if R Division ignored the transfer pricing policy and purchased all of the 20,000 components that it needs from an external supplier for $\$ 170$ each. Your answer must consider the impact at each of the three levels of demand (15,000, 19,000 and 35,000 components) from external customers for the component manufactured by S Division.
(c) The Organisation for Economic Co-operation and Development (OECD) produced guidelines with the aim of standardising national approaches to transfer pricing. The guidelines state that where necessary transfer prices should be adjusted using an "arm's length" price.

## Required:

## Explain:

(i) An "arm's length" price
(ii) The THREE methods that tax authorities can use to determine an "arm's length" price

## End of question paper

## Maths tables and formulae are on pages 11 to 14

This page is blank

## PRESENT VALUE TABLE

Present value of 1 unit of currency, that is $(1+r)^{-n}$ where $r=$ interest rate; $n=$ number of periods until payment or receipt.

| Periods |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $(n)$ | Interest rates $(r)$ |  |  |  |  |  |  |  |  |  |  |
|  | $1 \%$ | $2 \%$ | $3 \%$ | $4 \%$ | $5 \%$ | $6 \%$ | $7 \%$ | $8 \%$ | $9 \%$ | $10 \%$ |  |
| 1 | 0.990 | 0.980 | 0.971 | 0.962 | 0.952 | 0.943 | 0.935 | 0.926 | 0.917 | 0.909 |  |
| 2 | 0.980 | 0.961 | 0.943 | 0.925 | 0.907 | 0.890 | 0.873 | 0.857 | 0.842 | 0.826 |  |
| 3 | 0.971 | 0.942 | 0.915 | 0.889 | 0.864 | 0.840 | 0.816 | 0.794 | 0.772 | 0.751 |  |
| 4 | 0.961 | 0.924 | 0.888 | 0.855 | 0.823 | 0.792 | 0.763 | 0.735 | 0.708 | 0.683 |  |
| 5 | 0.951 | 0.906 | 0.863 | 0.822 | 0.784 | 0.747 | 0.713 | 0.681 | 0.650 | 0.621 |  |
| 6 | 0.942 | 0.888 | 0.837 | 0.790 | 0.746 | 0705 | 0.666 | 0.630 | 0.596 | 0.564 |  |
| 7 | 0.933 | 0.871 | 0.813 | 0.760 | 0.711 | 0.665 | 0.623 | 0.583 | 0.547 | 0.513 |  |
| 8 | 0.923 | 0.853 | 0.789 | 0.731 | 0.677 | 0.627 | 0.582 | 0.540 | 0.502 | 0.467 |  |
| 9 | 0.914 | 0.837 | 0.766 | 0.703 | 0.645 | 0.592 | 0.544 | 0.500 | 0.460 | 0.424 |  |
| 10 | 0.905 | 0.820 | 0.744 | 0.676 | 0.614 | 0.558 | 0.508 | 0.463 | 0.422 | 0.386 |  |
| 11 | 0.896 | 0.804 | 0.722 | 0.650 | 0.585 | 0.527 | 0.475 | 0.429 | 0.388 | 0.350 |  |
| 12 | 0.887 | 0.788 | 0.701 | 0.625 | 0.557 | 0.497 | 0.444 | 0.397 | 0.356 | 0.319 |  |
| 13 | 0.879 | 0.773 | 0.681 | 0.601 | 0.530 | 0.469 | 0.415 | 0.368 | 0.326 | 0.290 |  |
| 14 | 0.870 | 0.758 | 0.661 | 0.577 | 0.505 | 0.442 | 0.388 | 0.340 | 0.299 | 0.263 |  |
| 15 | 0.861 | 0.743 | 0.642 | 0.555 | 0.481 | 0.417 | 0.362 | 0.315 | 0.275 | 0.239 |  |
| 16 | 0.853 | 0.728 | 0.623 | 0.534 | 0.458 | 0.394 | 0.339 | 0.292 | 0.252 | 0.218 |  |
| 17 | 0.844 | 0.714 | 0.605 | 0.513 | 0.436 | 0.371 | 0.317 | 0.270 | 0.231 | 0.198 |  |

## PROBABILITY

$A \cup B=\boldsymbol{A}$ or $\boldsymbol{B}$. $\quad A \cap B=\boldsymbol{A}$ and $\boldsymbol{B}$ (overlap).
$P(B \mid A)=$ probability of $B$, given $A$.

## Rules of Addition

If $A$ and $B$ are mutually exclusive:
If $A$ and $B$ are not mutually exclusive:

$$
\begin{aligned}
& P(A \cup B)=P(A)+P(B) \\
& P(A \cup B)=P(A)+P(B)-P(A \cap B)
\end{aligned}
$$

## Rules of Multiplication

If $A$ and $B$ are independent:

$$
\begin{aligned}
& P(A \cap B)=P(A) * P(B) \\
& P(A \cap B)=P(A) * P(B \mid A)
\end{aligned}
$$

If $A$ and $B$ are not independent:
$E(X)=\sum$ (probability * payoff)

## DESCRIPTIVE STATISTICS

Arithmetic Mean

$$
\bar{x}=\frac{\sum x}{n} \quad \bar{x}=\frac{\sum f x}{\sum f} \quad \text { (frequency distribution) }
$$

Standard Deviation

$$
S D=\sqrt{\frac{\sum(x-\bar{x})^{2}}{n}} \quad S D=\sqrt{\frac{\sum \mathrm{fx}^{2}-\overline{\mathrm{x}^{2}}}{\sum \mathrm{f}}} \text { (frequency distribution) }
$$

## INDEX NUMBERS

Price relative $=100 * P_{1} / P_{0} \quad$ Quantity relative $=100 * Q_{1} / Q_{0}$
Price: $\quad \frac{\sum w *\left(\frac{P_{1}}{P_{o}}\right)}{\sum w} \times 100$

Quantity:

$$
\frac{\sum w *\left(\frac{Q_{1}}{Q_{0}}\right)}{\sum w} \times 100
$$

## TIME SERIES

Additive Model
Series = Trend + Seasonal + Random

Multiplicative Model

$$
\text { Series }=\text { Trend * Seasonal * Random }
$$

## FINANCIAL MATHEMATICS

## Compound Interest (Values and Sums)

Future Value $S$, of a sum of $X$, invested for $n$ periods, compounded at $r \%$ interest

$$
S=X[1+r]^{n}
$$

## Annuity

Present value of an annuity of $£ 1$ per annum receivable or payable for $n$ years, commencing in one year, discounted at $r \%$ per annum:

$$
\mathrm{PV}=\frac{1}{r}\left[1-\frac{1}{[1+r]^{n}}\right]
$$

## Perpetuity

Present value of $£ 1$ per annum, payable or receivable in perpetuity, commencing in one year, discounted at $r \%$ per annum:

$$
\mathrm{PV}=\frac{1}{r}
$$

## LEARNING CURVE

$$
Y_{x}=a x^{b}
$$

where:
$Y_{x}=$ the cumulative average time per unit to produce $X$ units;
$a=$ the time required to produce the first unit of output;
$X=$ the cumulative number of units;
$b=$ the index of learning.
The exponent $b$ is defined as the log of the learning curve improvement rate divided by $\log 2$.

## INVENTORY MANAGEMENT

Economic Order Quantity

$$
\mathrm{EOQ}=\sqrt{\frac{2 \mathrm{C}_{0} \mathrm{D}}{\mathrm{C}_{\mathrm{h}}}}
$$

where: $\mathrm{C}_{0}=$ cost of placing an order
$\mathrm{C}_{\mathrm{h}} \quad=\quad$ cost of holding one unit in inventory for one year
D $=$ annual demand

## LIST OF VERBS USED IN THE QUESTION REQUIREMENTS

A list of the learning objectives and verbs that appear in the syllabus and in the question requirements for each question in this paper.
It is important that you answer the question according to the definition of the verb.

| LEARNING OBJECTIVE | VERBS USED | DEFINITION |
| :--- | :--- | :--- |
| Level $\mathbf{1}$ - KNOWLEDGE <br> What you are expected to know. |  |  |
|  | List | Make a list of |
|  | State <br> Level $\mathbf{2}$ - COMPREHENSION | Express, fully or clearly, the details/facts of |
| What you are expected to understand. |  | Give the exact meaning of |

## Performance Pillar
